April 16, 2019

Law and Economics Seminar: Dr. Amanda Agan

Time: 4:30pm - 6:00pm
Location: Tanenbaum 320

Dr. Amanda Agan, Affiliated Professor, Program in Criminal Justice, Assistant Professor of Economics, Rutgers University

Salary Disclosure and Hiring: Field Experimental Evidence from a Two-Sided Audit Study

How does banning employers from seeking applicants’ wage histories affect employment and salary offers? We implement a field experimental design we call a two-sided audit study, in which recruiters evaluate job applications with randomized characteristics under randomly assigned salary disclosure conditions. The experiment mimics laws passed in Massachusetts, California, New York City, and Chicago banning these questions. When disclosure is banned, recruiters in our experiment extend candidates lower overall salary offers. We find mixed results about the effect of disclosures on the gender wage gap. Disclosure increases male salaries more than female salaries, although this may only affect workers who are hired. Disclosure also improves female callback rates, without affecting men’s. The overall effect of bans on the gender wage gap hinges on how we assess greater female representation.

Amanda Agan joined the Department of Economics in Fall 2016. Her research focuses on the economics of crime and labor economics. In Amanda’s research she has analyzed the unintended consequences of policies such as sex offender registration and ban the box laws. She has published studies in the Journal of Law and Economics and the Journal of Empirical and Legal Studies. Prior to joining Rutgers University she was a post-doctoral research associate in the Economics Department and the Industrial Relations Section at Princeton University. She received her Ph.D. Economics from the University of Chicago in 2013 and holds a B.A. in Economics from George Mason University.
