The Operational and Administrative Militaries

Mark Patrick Nevitt

This Article offers a new way of thinking about the military. The U.S. military’s existing legal architecture arose from tragedy: in response to operational military failures in Vietnam, the 1980 failed Iranian hostage rescue attempt and other military misadventures, Congress revamped the Department of Defense (DoD)’s organization. The resulting law, the Goldwater-Nichols Act, formed two militaries within the DoD that endure to this day. These two militaries – the operational military and the administrative military – were once opaque to the outside observer but have emerged from the shadows in light of recent conflicts. The operational military remains the focus of the executive branch, led by uniformed combatant commanders responsible for planning and fighting the nation’s wars as well as an expanding menu of foreign-relations functions. In contrast, Congress primarily focuses on the administrative military, which is largely led by civilian Secretaries of military departments responsible for staffing, training, and equipping the nation’s Armed Forces. The operational military fights, while the administrative military trains and equips.

Understanding how these two militaries arose from their early constitutional origins, evolved after the Second World War, and function in the modern administrative state is essential to a complete understanding of national security governance and its corresponding effects on civilian control of the military. In this Article, I first describe and propose this new two-military framework that has its origins in the Constitution, was further refined in statute, and solidified in military doctrine and agency practice. Second, I address the two-military divide’s consequences – many unintended – showcasing how the Goldwater-Nichols Act in particular incentivizes congressional attention over administrative military matters at the expense of operational military oversight. Finally, I conclude with initial recommendations to “combat” this two-military divide and corresponding executive drift, presenting an integrated national security governance vision that draws upon expertise from other federal agencies.

* Mark P. Nevitt is the Sharswood Fellow, Lecturer-in-Law at the University of Pennsylvania Law School. A former Navy JAG and tactical jet aviator, he served in the rank of Commander, and most recently served as the Deputy Director of Administrative Law for the Office of the Navy JAG in the Pentagon. This Article benefitted from faculty and fellows roundtables at Penn Law and the AALS New Voices in National Security Law workshop in San Diego with helpful feedback from Professors William Banks, Peter Margulies and Robert Percival. Special thanks to Professors Stephanos Bibas, Sean Burke, Angus Corbett, Geoffrey Corn, Paul Diller, Jean Galbraith, David Hoffman, Michael Horowitz, Rebecca Ingber, Sophia Lee, Gabe Scheffler, Serena Mayeri, David Pozen, Dakota Rudesill, Daniel Walters, David Wishnick, Rachel VanLandingham, Lieutenant Commander Brian Corcoran and Sara Zdeb for their comments on previous drafts as well as the outstanding legal research provided by Mr. Al Dong and Ben Meltzer of the Penn Law library.
Introduction

Admiral James Stavridis collapsed in his chair, exhausted. It was 2009 and the four-star Navy admiral had just finished a six-month whirlwind tour of over thirty nations, flying on a state of the art military aircraft surrounded by an enormous staff. He met with leaders from every member of the North Atlantic Treaty Organization (NATO), the heads of Russia and Israel, and several prospective U.S. and NATO allies. Perhaps not surprisingly, he met with each nation’s senior military leaders and Ministers of Defense in an effort to strengthen military-to-military relations and reinforce the bonds of the Atlantic Alliance that date back to General Eisenhower and the end of the Second World War.

Perhaps surprisingly, Admiral Stavridis also met with the Presidents of each nation, their Foreign Ministers, and a host of non-military diplomats. Outside of military matters, Admiral Stavridis also made diplomatic requests. It was easy for his staff to set up meetings with just about anyone in Europe. Indeed, everyone in Europe was clamoring to meet Admiral Stavridis, the senior U.S. military officer in Europe who possessed enormous operational authorities central to their own nation’s defense. He also brought with him the promise of foreign military sales, future military funding, and easy access to the vast Washington national security apparatus. To many, he was the most important American on the continent, a man worth knowing and someone possessing not just a military role but also important and expanding foreign relations responsibilities. When he called, Presidents and Prime Ministers picked up the phone and made time.1

What position in the vast military bureaucracy did Admiral Stavridis hold? Admiral Stavridis had just been appointed by the President and confirmed by Congress as the leader of U.S. European Command, one of five extraterritorial U.S. geographic combatant commanders. These positions play an increasingly important but poorly understood role in the largest military (and bureaucracy) in the world. Described by some commentators as “viceroys”2 or “modern Roman pro-consuls,”3 the 1947 National Security Act established these positions – but their authorities had to wait to be fully actuated via the 1986 Goldwater-Nichols Act. These combatant commanders lie at the heart of what I refer to as the operational military, and their

---

1 This vignette is largely borrowed from ADMIRAL (RET.) JAMES STAVRIDIS, THE ACCIDENTAL ADMIRAL 28-30 (2014). In addition to his position as U.S. European Commander, Admiral Stavridis was “dual-hatted” as NATO’s Supreme Allied Commander Europe. Id.
authorities and influence are growing, largely unrestrained by Congress and the executive branch.

Most reasonably well-informed people believe that executive authority over the military has grown at the expense of congressional authority for a variety of reasons, including congressional dysfunction, or some version of an “executive unbound” or an “Imperial Presidency” further facilitated by the nature of modern warfare. That’s not untrue, but it’s only part of a much larger story. Another part of the story – largely unexplored by existing legal scholarship – is the military’s legal architecture and agency design.

This Article offers a new way to think about the military. I argue that there are, in fact, two militaries residing within the DoD: an “operational” military and an “administrative” military. Each military has its own chain of command, of critical importance to a hierarchical federal agency backed by the force of criminal law. I assert that the dual-military bureaucracy proposed in this Article has broad implications for such weighty topics as national security governance, administrative law, and civilian oversight of the military.

The terms “administrative military” and “operational” military are absent from the text of the Constitution and neither is defined in law, regulation, or existing legal scholarship. The first military, the operational military, is led by uniformed combatant commanders and receives direction from the Chairman of the Joint Chiefs of Staff (CJCS). Already quite powerful, these combatant commanders’ powers are growing. They not only plan and fight the nation’s wars; they now perform an expanding menu of non-traditional military functions to include foreign relations functions as well. Combatant commanders have a continuous presence abroad with massive staffs and resources. And as State Department billets are gapped and its funding slashed, combatant commanders fill the foreign policy void as the default American diplomatic agents abroad.

---

4 See Adrian Vermeule & Eric Posner, The Executive Unbound (2010); Arthur M. Schlesinger, Jr., The Imperial Presidency (1973). And Congress no longer declares war – the last declaration of war dates from 1942.
5 I am the first legal scholar to describe this two military divide to include an operational and administrative divide.
6 The Commander in Chief Clause ensures that there is an elected civilian head of the military. “The Constitution fails to specify where the authority of the Commander in Chief ends and that of Congress begins.” Christopher M. Bourne, Unintended Consequences of the Goldwater-Nichols Act, Joint Forces Quart. 99, 100 (Spr. 1998).
7 See generally Reveron, supra note 2, at 1–14.
8 See Rosa Brooks, How the Military Became Everything and Everything Became War (2016); Priest, supra note 3, at 61-65 (describing the rise of combatant commanders and their role in foreign policy).
The second military, the administrative military, is largely led by civilian Secretaries of military departments responsible for staffing, training, and equipping the operational military.\(^9\) One serves the other. While both militaries ultimately report to the Secretary of Defense and the Commander in Chief, the administrative military remains the outsized focus of congressional oversight.

I define and derive “operational military” and “administrative military” from existing law, regulation and doctrine as follows:

- **Operational military:** Established by the Constitution, statute and military doctrine, the operational military is the part of the DoD responsible for the planning and execution of the nation’s war fighting, training foreign forces, military-to-military engagement, and an increasing range of foreign relations activities.\(^10\) It receives its forces (personnel, equipment, weapons) from the administrative military and its day-to-day implementation is governed by the doctrinal terms of combatant command, operational control, and tactical control. Uniformed combatant commanders and subordinate joint task force commanders effectively lead the operational military.\(^11\)

---

\(^9\) *See, e.g.*, 10 U.S.C. § 5013 (2012) (describing the administrative duties of the Secretary of the Navy). The military often uses outdated terminology to refer to these Title 10 functions as “man, train, and equip.” I intentionally use the gender-neutral term “staffing” to better reflect the important role that women are increasingly playing in the Armed Forces and the current “no exceptions” combat policy in effect.

\(^10\) The DoD and other governmental agencies also have an enormous intelligence apparatus reporting to the Director of National Intelligence pursuant to the existing intelligence statutory framework dating from 2004. It is beyond the scope of this paper to discuss the institutional mechanics of the intelligence community (IC), but the operational and administrative military divide has enormous follow-on consequences within the IC due to the 2004 Intelligence Reform and Terrorism Protection Act and the creation of the Office of the Director of National Intelligence. See 50 U.S.C. § 401 (2012) *et. seq.*

Further, while this Article focuses on the administrative military, there is a sub-section of the administrative military – the military defense agencies – that adds an additional layer of complexity to any analysis, but which is beyond the scope of this Article. These 17 defense agencies – to include Defense Logistics Agency (DLA) and Defense Finance and Accounting Service (DFAS) – account for an enormous budget ($85-90 billion), but are not the focus of the Secretary of Defense or Congress and are subject to only sporadic oversight. *30 Years of Goldwater-Nichols Reform: Hearing Before the S. Comm. on the Armed Services*, 114th Cong. 50 (2015) (statement of Dr. John Hamre, President and Chief Executive Officer, Center for Strategic and International Studies) [hereinafter *Goldwater-Nichols Hearing*]. “Ray Mabus complained that 20 percent of the defense budget went to the Fourth Estate – the defense agencies that provide support to the armed forces – and called it pure overhead.” *Hearing Before the H. Comm. on Oversight and Government Reform*, 115th Cong. 2–3 (2017) (prepared testimony of Lawrence J. Korb).

\(^11\) *See infra* Parts I.B-C, II. The definition is largely derived from (1) Article II of the Constitution to include the Commander in Chief clause; (2) statutes addressing the roles and
• **Administrative military**: Established by the Constitution, statute, and military doctrine, the administrative military is the part of the DoD responsible for personnel management, staffing, recruiting, testing, training, health care, equipping and hardware acquisition. It provides forces to the operational military. The civilian Secretaries of the military departments and the uniformed heads of each military branch – the service “chiefs” – largely lead the administrative military. Its implementation is governed by the doctrinal term *administrative control*.12

The divide between the operational and administrative militaries creates two main problems: (1) it incentivizes congressional focus on the administrative military while making it harder for Congress – and the American citizenry – to oversee operational military matters; and (2) it facilitates an internal bureaucratic misalignment in which the administrative military too often provides the wrong forces (personnel, equipment, weaponry) to the operational military, further undermining operational effectiveness.

Today, the DoD is the world’s largest bureaucracy and employer.13 Its organizational set-up is complex, its size vast, and its mission idiosyncratic: DoD is responsible for the nation’s defense including the lawful application of military force to fight and win the nation’s wars.14 The very nature of its responsibility of the combatant commanders; and (3) the law of the chain of command and military doctrine to include combatant command control, operational control, and tactical control.

12 See infra Parts I.B-C, II. This definition is derived from (1) Article I of the Constitution; (2) statutes addressing the roles and responsibility of the Secretaries of the Military Departments; and (3) the law of the chain of command and military doctrine to include administrative control.

14 Forest L. Reinhardt & Michael W. Toffel, *Managing Climate Change: Lessons from the U.S. Navy*, HARV. BUS. REV. Jul/Aug 2017, at 102. “Military organizations are idiosyncratic and special. Their primary ‘output’ is lethal force, controlled in ways that compel people to do what they don’t want to do. No legitimate firm does anything remotely comparable.” Id. The DoD mission statement states that it “shall maintain and use armed forces to support and defend the Constitution of the United States against all enemies, foreign and domestic; Ensure, by timely and effective military action, the security of the United States, its possessions, and areas vital to its interest; Uphold and advance the national policies and interests of the United States.” DEPT OF DEF., DEPT OF DEF. DIR.
activities raises several questions: How is this vast and multifaceted institution designed? Does the agency design strengthen or undermine civilian control of the military? How is the DoD – as a federal agency – subject to laws such as the Administrative Procedure Act (APA) that govern federal agency actions?  

The answer lies in the organization. In particular, it lies with a fuller understanding of DoD’s unique and complex agency design that allocates power within the government’s largest agency. Consider the following examples:

- **Militarization of Foreign Policy.** The existing legal architecture establishes a set of richly resourced and permanent geographic combatant commanders stationed overseas that are the heart of the operational military. They remain busy in war and peace. These commands reside throughout the world with personnel and resources far outpacing the rapidly shrinking State Department’s size and budget. Not only do these combatant commanders plan and fight the nation’s wars, they are taking on an increasing role in foreign policy.

- **Imbalance in Congressional Testimony.** Each year, congressional committees with military oversight responsibilities hear testimony from civilian and uniformed military leadership. The uniformed geographic

5100.01: FUNCTIONS OF THE DEPARTMENT OF DEFENSE AND ITS MANY COMPONENTS (Dec. 21, 2010).

15 I define “forces” broadly as set forth in DoD’s Dictionary of Military and Associated Terms to include “An aggregation of military personnel, weapon systems, equipment, and necessary support, or combination thereof . . .[or] a major subdivision of a fleet.” See also DEPT OF DEF., JOINT PUBLICATION 1-02: DEP’T OF DEFENSE DICTIONARY OF MILITARY AND ASSOCIATED TERMS 89 (as amended through Aug. 2017) [hereinafter DOD DICTIONARY].

17 The Trump Administration sought a 9.4% increase in the upcoming Department of Defense’s budget and a 30% decrease in the State Department budget. While Congress ultimately bulked the State Department budget by $11 billion, it is undergoing a dramatic reduction in resources and personnel. See Robbie Gramer, Dan DeLuce, & Colum Lynch, How the Trump Administration Broke the State Department, FOREIGN POLICY, Jul. 31, 2017, http://foreignpolicy.com/2017/07/31/how-the-trump-administration-broke-the-state-department/.

18 Edward Marks, Rethinking the Geographic Combatant Commands, INTERAGENCY JOURNAL 19, 19-20 (Fall 2010).
combatant commanders – the heads of the operational military – are normally required to testify before Congress just once a year, often seeking increased funding and resources. In contrast, the administrative military leaders testify in front of Congress in far greater numbers.\(^19\) And the administrative military leaders are more likely to be “called to the congressional carpet” whenever there is a scandal, regardless of its nature.\(^20\)

- **Congressional Funding.** Each year, Congress passes the National Defense Authorization Act (NDAA), a massive funding bill that serves as a yearly litmus test for determining congressional priorities over the DoD. This funding bill is heavily focused on the administrative military while granting the operational military considerably greater discretion over spending.\(^21\)

- **Special Operations and the Rise of “Secret Wars.”** U.S. Special Operations Forces (SOF) function as part of a “super combatant command,” the true amplification of the operational military.\(^22\) They operate almost everywhere today – 138 nations of the world at last count – double the number from just 10 years ago.\(^23\) Special forces now shoulder the burden of most of the U.S. military’s casualties.\(^24\) As they are employed in new ways – to include covert action authorities that are purposely kept out of the public eye – congressional oversight has lagged.\(^25\) And Congress has

---

\(^{19}\) The combatant commanders, in contrast, normally testify just once a year via “posture statements.”

\(^{20}\) For example, in the recent mishap involving a ship collision in the Navy’s Seventh Fleet, the heads of the administrative military were called before Congress. Indeed, “Congress regularly calls the Service Secretary or Service Chief on the carpet when investigating the latest acquisition foibles, even though they are not in the acquisition management chain of command . . .” See CENTER FOR STRATEGIC AND INTERNATIONAL STUDIES, BEYOND GOLDWATER-NICHOLS: U.S. GOVERNMENT AND DEFENSE REFORM FOR A NEW STRATEGIC ERA 94 (2006).

\(^{21}\) For example, the NDAA focuses on core aspects of the administrative military (health care, administration, personnel, etc). In the most recent Fiscal Year-18 NDAA, there are 47 titles covering 740 pages addressing a wide variety of DoD activities. Of the 47 titles, only five address in any meaningful way operational military matters as defined in infra Part I.

\(^{22}\) And SOCOM is the only military command specifically established by Congress. 10 U.S.C. § 167 (2012).

\(^{24}\) Id.

\(^{25}\) Covert action is defined as, “An activity or activities of the United States Government to influence political, economic, or military conditions abroad, where it is
facilitated SOFs’ rise with an increased budget, personnel, and legal authorities without a corresponding increase in oversight.26 Why?

• The Operational/Administrative Disconnect: The two-military divide also creates a practical problem: too often the administrative military gives the operational military the wrong “stuff.” Or it provides equipment that the operational military doesn’t want or need at significant taxpayer expense.27

This Article addresses these issues in the following order.

In Part I, I propose this new two-military framework.28 This Part begins with a brief historical overview of the dual-military state, and argues that these two militaries co-existed in some form since the nation’s founding, grew further apart following World War II and the National Security Act, and effectively separated following the passage of the 1986 Goldwater-Nichols Act.

Part II describes and analyzes the Goldwater-Nichols Act. Largely unexamined by existing legal scholarship, the Act establishes the civil-military chain of command, critical to ensuring objective civilian control of the military. Under the DoD’s agency design, the civilian Secretaries of the military departments are relegated to a secondary role as the heads of the administrative military, supporting the uniformed military combatant commanders. 29 The operational military commanders, in turn, are intended that the role of the United States Government will not be apparent or acknowledged publicly.” 50 U.S.C. § 3093 (e) (2012) (emphasis provided).

26 During the recent military tragedy in Niger and Mali where four U.S. special forces personnel were killed, Senators Schumer (D-NY) and Graham (R-SC), both charged with military oversight, professed ignorance about the fact that the U.S. military was even present in that part of the world. Dionne Searcey & Eric Schmitt, In Niger, Where U.S. Troops Died, a Lawless and Shifting Landscape, N.Y. TIMES, Oct. 30, 2017, at A5 (quoting Senator Graham as stating, “[w]e don’t know exactly where we’re at in the world, militarily, and what we’re doing”).

27 Secretary of Defense Robert Gates struggled mightily to provide armored vehicles to the operational military during the heaviest fighting in Afghanistan, but he ran up against administrative military headwinds that fought his requests at every turn. Ultimately, even Gates was forced to work around the Goldwater-Nichols–designed bureaucracy that he was leading. ROBERT GATES, DUTY: MEMOIRS OF A SECRETARY OF WAR (2014).

28 “Civilian control of military institutions” is not specifically defined or mentioned in the Constitution’s text. PETER D. FEATHER, ARMED SERVANTS: AGENCY, OVERSIGHT, AND CIVIL-MILITARY RELATIONS (2003). Christopher M. Bourne, Unintended Consequences of the Goldwater-Nichols Act, JOINT FORCES QUART. 99, 100 (Spr. 1998).

29 10 U.S.C. § 162 (a) (2012). ASSIGNMENT OF FORCES. “ . . . the Secretaries of the military departments shall assign all forces under their jurisdiction to unified and specified combatant commands to perform missions assigned to those commands.” While some services keep forces as service-specific, they represent a small fraction of forces. In addition,
increasingly delegated broader war-making authorities, accelerating independent executive action at the expense of congressional oversight.\textsuperscript{30} The Trump Administration’s deference to operational military commanders magnifies an already existing trend.

Part III addresses the two-military divide’s consequences, many unintended. Adrian Vermeule, David Dyzenhaus and other scholars have described the emergence of aptly named “black holes” and “grey holes” and their effects on administrative law governance during times of war and emergency.\textsuperscript{31} These holes serve as legal trap doors that exempt or modify certain agency actions depending on external factors.\textsuperscript{32} But there are also internal factors unique to DoD and its organizational design – what I refer to as “institutional holes” – where administrative law lacks a clear application. And within these institutional holes, governmental actions are often shrouded in secrecy – itself a form of regulation.\textsuperscript{33}

Part IV addresses several independent accelerants of this two-military divide, demonstrating the urgency of this problem. Finally, Part V provides initial recommendations with an eye toward strengthening civilian control of the operational military and reforming national security governance. A brief conclusion follows.

\section{I. FROM THE NATION’S FOUNDING TO THE COLD WAR: THE TWO MILITARIES’ ORIGINS}

The term “civilian control of the military” is likewise absent from the text of the Constitution and applicable laws. Indeed, civilian control of the military is best understood as a longstanding constitutional norm gleaned from the Constitution’s text – in particular, from its placement of an elected civilian President as head of the Army and Navy.\textsuperscript{34} Today, the norm is implemented via governing statutes, particularly the Goldwater-Nichols Act, “forces” is broadly defined to include “[a]n aggregation of military personnel, weapon systems, equipment, and necessary support, or combination thereof.” DoD Dictionary, supra note 8, at 89.

\textsuperscript{32} The term legal “black hole” was first used to describe the inapplicability of law to Guantanamo Bay detainees in the aftermath of 9/11. Dyzenhaus, supra note 27.

\textsuperscript{33} See id. Cf. Vermeule, supra note 27, at 1112 (describing how the early APA exemptions as applied to the military are “rarely litigated”).

\textsuperscript{34} U.S. Const. art. II, § 2, cl. 2.
which reinforces civilian control of the military through the establishment of a lawful chain of command subordinating the military to civilian leadership.\textsuperscript{35}

A. The Two-Military Glossary and Overview of Five Key Terms

Before I dive into the history and particulars of DoD’s legal architecture, we begin with a brief glossary of the relevant terms necessary to understanding this two-military framework and corresponding analysis. The following five key terms are essential to understanding the operational/administrative military divide. The five terms that follow these two definitions all have a “black letter” definition that can be more clearly traced to existing law, regulation or doctrine.

- \textit{Chairman, Joint Chiefs of Staff (CJCS):} By law, the principal military advisor to the President, Secretary of Defense, National Security Council and Homeland Security Council for all military matters, but plays an outsized role in operational military matters.\textsuperscript{36} The Chairman lacks command authority but has enormous informal authority, communicating operational military orders to combatant and joint task force commanders. Members of the Joint Chiefs of Staff include the uniformed “service Chiefs,” but they lack a clear line of communication to the President and Secretary of Defense.\textsuperscript{37}

- \textit{Combatant Commanders:} Within the operational military, uniformed, four-star military officers who head one of the ten combatant commands and lead the operational military.\textsuperscript{38} The five geographic combatant commanders outside the United States and Special Operations Command are the true “heart” of the operational military and exercise an increasingly important but not well-understood role in national security law and governance.

- \textit{Secretaries of military departments:} Within the administrative military, politically appointed, civilian heads of the three military

\textsuperscript{36} 10 U.S.C. § 151 (2012).
\textsuperscript{37} \textit{Joint Chiefs of Staff, Joint Pub. 1, Doctrine for the Armed Forces of the United States} III-4, III-5 (as amended through Mar. 25, 2013).[hereinafter \textit{Joint Publication 1}]
\textsuperscript{38} As of this writing, the ten combatant commands include six geographic commands (five overseas): Africa Command, Central Command, European Command, Northern Command, Pacific Command, and Southern Command and four functional combatant commands – Cyber Command, Strategic Command, Special Operations Command, and Transportation Command.
departments (Army, Navy, & Air Force) that lead the administrative military and provide oversight over the uniformed service “chiefs.” Military departments are “agencies” within the meaning of the APA.

- **Joint**: “[A]ctivities, operations, organizations, etc., in which elements of two or more military departments participate.”

- **Joint military doctrine**: Fundamental principles that guide the employment of United States military forces in coordinated action toward a common objective and may include terms, tactics, techniques, and procedures.

**B. The Operational Military’s Constitutional Nexus to the Executive and the Administrative Military’s Constitutional Nexus to Congress**

The operational military has existed in some capacity since our nation’s founding. Its primary legal authority can be found within the text of the Constitution, particularly in Article II and the Commander in Chief clause:

> [T]he President shall be Commander in Chief of the Army of the United States, and of the Militia of the several States, when called into actual service of the United States.

The precise scope of this authority has befuddled scholars and jurists since the Constitution’s inception. Despite its clear modern-day importance for the scope of operational military matters, the clause was not discussed at length during the Constitutional Convention. The exact breadth and scope of this authority are not without limit, although it has been consistently

---

39 Under existing law, the Marine Corps is part of the Department of the Navy. 10 U.S.C. § 5061 (2012).
41 **DOD DICTIONARY, supra** note 8, at 121.
42 *Id.* at 123.
43 Broadly speaking, Congress has the constitutional power of the “purse” while the executive has the power of the “sword.” **THE FEDERALIST NO. 10** (James Madison).
44 **U.S. CONST.** art. II, § 2, cl. 2.
45 *Id.*
46 Justice Jackson’s famously stated “a judge, like an executive adviser, may be surprised at the poverty of really useful and unambiguous authority applicable to concrete problems of executive power as they actually present themselves. Just what our forefathers did envision, or would have envisioned had they foreseen modern conditions, must be divined from materials almost as enigmatic as the dreams Joseph was called upon to interpret for Pharaoh.” See **Youngstown Sheet and Tube Co. v. Sawyer**, 343 U.S. 579, 634 (1952) (Jackson, J., concurring).
understood to include the authority to command and control military operations. While a comprehensive review of the President’s powers as Commander in Chief is beyond the scope of this Article, two views emerged during the nation’s founding that are particularly relevant to the modern military divide.

The first view, held by anti-Federalists (as well as Thomas Jefferson), reflected an abiding faith in citizen-militias and a profound suspicion of continual standing armies. This view reflected a deep aversion to the concentration of military power within any single military officer. The second view, in contrast, held by the Federalists and Alexander Hamilton, favored centralization, saw the need for standing armies and navies, and favored more streamlined authority that favored quicker executive action. In the Federalist Papers, Hamilton wrote that the Commander in Chief authority “would amount to nothing more than the supreme command and direction of the Military and naval forces, as first general and admiral of the confederacy.” Hamilton stated that the Commander in Chief had the authority over the tactical movement of troops and vessels, foreshadowing doctrinal authorities integral to the modern operational military.

The earliest views of the Commander in Chief’s authority as the tactical and operational leader of the armed forces live on in the operational military’s definition and in modern legal and doctrinal authorities. For example, in 1850, Chief Justice Taney, speaking for the Court in Fleming v. Page, emphasized the President’s tactical command over military forces during military operations:

---

48 ROBERT CHERNOW, HAMILTON 253-60 (2004). See also Goldwater-Nichols Hearing, supra note 33, at 36 (statement of Jim Thomas, Vice-President and Director of Studies, Center for Strategic and Budgetary Assessments), (“The way we do command and control in the American military is exceptional. It is unlike the command and control for any other country in the world. And we have had a tension, since the founding of the Republic, between a Jeffersonian aversion to . . . the concentration of power in any military officer versus the Hamiltonian impulse toward centralization and effectiveness. . .”). Id.
49 THE FEDERALIST, NO. 69 (Alexander Hamilton). From the Federalist Papers to modern doctrine, one can see the evolution of the operational military. “The President is to be commander-in-chief of the army and navy of the United States . . . [t]he authority over forces that is limited to the detailed direction and control of movements or maneuvers within the operational area necessary to accomplish missions or tasks assigned.” DoD DICTIONARY, supra note 8, at 226.
50 Id.
His duty and his power are purely military. As commander-in-chief, he is authorized to direct the movement of the naval and military forces placed by law at his command, and to employ them in the manner he may deem effectual to harass and conquer and subdue the enemy . . .

So this authority has always been understood to authorize the President to take command of the troops in the field. Indeed, President Washington once did just that, personally commanding militia forces in the Whiskey Rebellion of 1794.

In contrast, the administrative military’s origins are more closely aligned with congressional authorities within the Constitution’s text. At the time of the Constitutional Convention, the issue of standing armies, where they should come from (states? Federal government?), and who should control them were all hotly debated.

Congress controls all military appropriations to include the “power of the purse” and oversight over the DoD’s annual budget. Congress also has the power to “declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water.” It has the authority to both “raise and support armies,” (limited to two years) and “provide and maintain a Navy” (no time limitation) as well as the constitutional authority to “make regulations governing the Armed Forces.” In addition, under the Constitution’s two Militia clauses, Congress has the Power “to provide for Calling forth the Militia to execute the Laws of the Union, suppress Insurrections, and repel Invasions” and the power “[to] provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the Service of the United States.”

---

51 Fleming v. Page, 50 U.S. (9 How.) 603, 615 (1850). This was reinforced in a case decided after the Civil War, describing the role of the President as Commander in Chief as “the command of the forces and the conduct of campaigns.” Ex parte Milligan, 71 U.S. (4 Wall.) 2, 139 (1866).

54 Each year, Congress passes the yearly National Defense Authorization Act (NDAA), an enormous piece of annual legislation that can surpass 1,000 pages. The majority of the subject matter is focused on administrative matters. See supra note 14.

55 U.S. CONST. art. I, § 8 cl. 11.

58 U.S. CONST. art. I, § 8, cl. 15.

59 U.S. CONST. art. I, § 8, cl. 16.
Although neither the Federalists nor the anti-Federalists could have anticipated the modern DoD’s massive size, their competing visions continue to play out in the two-military divide. Indeed, the seeds for a two-military division were sown from the nation’s very beginning. For example, the Hamiltonian vision of a centralized, effective, and efficient executive and military is best reflected in the operational military with its shorter chain of command and relative efficiency while the anti-Federalist vision of a more diffuse, de-centralized power structure lives on in the administrative military.

The size of the military waxed and waned throughout American history until the end of World War II. Standing armies became a permanent fixture with the emergence of the Cold War: The National Security Act of 1947 created the modern military infrastructure, discussed below.

C. The Two Militaries’ Statutory Origins: The National Security Act (1947) and the Rise of Standing Armies and Navies

The National Security Act of 1947 established the modern national security organizational structure and core institutions that continue in some form to this day. Specifically, it created the National Military Establishment, CIA, National Security Council, and the Secretary of Defense. It also established the Office of the Secretary of Defense, ensuring civilian oversight over the entire military apparatus (operational and administrative), bringing all three services (Army, Navy, Air Force) under the Secretary of Defense’s auspices. The law’s passage coincided with a massive and continual standing Army for the first time in American history, forever changing the allocation of power between Congress and the President.

The National Security Act also demoted the Secretary of the Navy from a Cabinet official to a military department head, and created the Air Force as a new military department – an outgrowth of the Army Air Corps. And in establishing a single Cabinet-level Secretary of Defense over all the services, it sought to solve a problem that persisted throughout World War II: inter-service rivalry that greatly undermined operational military effectiveness. During World War II, the uniformed heads of the Army and Navy possessed

60 Indeed, near the turn of the century at the outbreak of the Spanish American War, the size of the New York Police Department exceeded that of the entire U.S. military.

61 See, e.g., OMAR N. BRADLEY AND CLAY BLAIR, A GENERAL’S LIFE 466 (1983). In 1949, two years later, the term “National Military Establishment” was changed to the Department of Defense. Id.

both administrative and operational authorities, but the services were often at loggerheads with one another. While ultimately successful in Allied victory, the Army and Navy failed to seamlessly conduct joint Navy and Army operations throughout the war. As President Truman declared,

We must never fight another war the way that we fought the last two. I have a feeling if the Army and Navy had fought our enemies as hard as they fought each other, the war would have ended much earlier.

For this reason, the National Security Act placed the three military services under the direction, authority, and control of one civilian Secretary of Defense. A civilian served as the Secretary of each military department with a senior uniformed “service chief” reporting to each Secretary. The National Security Act also formed the early infrastructure for the modern military organization where civilian Secretaries of the military departments, in theory, provide the forces under the unified strategic direction of the combatant command.

Following the National Security Act’s passage, President Eisenhower sought to further increase the power of the Office of the Secretary of Defense and tightened civilian control of the military with follow-on reform efforts in 1953 and 1958. But despite Truman and Eisenhower’s efforts to reduce interservice rivalry and improve defense acquisitions efficiency, these problems remained unresolved.

This legal architecture remained in place throughout the Cold War and the Vietnam War. The civilian leadership and Secretary of Defense exercised considerable control over the military throughout the 1960s and the Vietnam War. Secretary of Defense Robert S. McNamara famously brought in data-driven “Whiz Kids” to the Pentagon. And President Johnson and McNamara were intimately involved in operational decision-making throughout the

---

63 For example, Admiral Nimitz served as the head of the Navy in the Pacific Fleet in the Northern Pacific and General MacArthur served as head of the Army in the Southern Pacific. Joint, unified military operations were virtually non-existent in the Pacific theater.

67 50 U.S.C. § 3002 (2012). For example, the Department of the Navy is defined as:

[T]he Department of the Navy at the seat of government; the headquarters United States Marine Corps; the entire operating forces of the United States Navy, including naval aviation, and of the United States Marine Corps, including the reserve components of such forces; all field activities, headquarters, forces, bases, installations, activities and functions under the control or supervision of the Department of the Navy; and the United States Coast Guard when operating as part of the Navy pursuant to law. 50 U.S.C. § 3004 (2012).
Vietnam War. The Chairman of the Joint Staff did not regularly advise the President on military matters: he only met with the President twice before the introduction of ground troops in Vietnam. Commentators have argued that the absence of routine military advice often led to disaster. Indeed, it was not uncommon for President Johnson and Secretary McNamara to make targeting and tactical military decisions—such decisions were, historically, within the powers of military commanders in the field.

Following the Vietnam War, the individual services still possessed enormous power and influence both in administrative and operational matters. Each service continued to exercise both operational and administrative control over their respective forces: Navy admirals continued to command ships, aircraft carriers and sailors, and Army generals commanded Army brigades, tank and infantry battalions and soldiers. Seldom did Navy admirals command Army soldiers and vice versa.

Joint warfare was simply not a reality between 1947 and 1986, harming operational military effectiveness. Each military service, in effect, was still “king” and joint, unified warfare across the services was not codified in law. The combatant commands’ operational authorities and the efficacious joint warfare had to wait until the Goldwater-Nichols Act of 1986 to be fully realized.

II. THE GOLDWATER-NICHOLS ACT OF 1986 ACCELERATES THE OPERATIONAL AND ADMINISTRATIVE MILITARY DIVIDE

An casual observer may chalk up today’s relative lack of civilian oversight over the operational military to an underlying tactical and technological problem: the military needs to be poised for a swift response in the face of fast-paced and complex threats facing the nation (cyber, transnational terrorism, etc.). That’s not irrelevant, but there’s more to it. The statutory regime adopted in 1986 in an attempt to improve military operational effectiveness and reduce inter-service rivalry created a structure that further isolated the operational military from oversight.

68 And he has been heavily criticized for this. See, e.g., H.R. McMaster, Dereliction of Duty (1997).
69 See id.
70 For a discussion of this civil-military dynamic, see generally McMaster, supra note 68.
71 In his last years in office, President Eisenhower sought to build upon the National Security Act reforms. He somewhat succeeded. The DoD Reorganization Act of 1958 established a clear line of command from the President through the Secretary of Defense to the combatant commands. Feickert, supra note 64, at 5.
The concepts of command and control are of central importance for the military and define how the DoD allocates power within the agency. Under joint military doctrine, command is defined as “the authority that a commander in the armed forces lawfully exercises over subordinates by virtue of rank or assignment.” Command is “the most important role undertaken by a joint force commander” and includes “[a]n order given by a commander; that is, the will of the commander expressed for the purpose of bringing about a particular action.” Control is a lesser authority. It includes “authority that may be less than full command exercised by a commander over part of the activities of subordinate or other organizations.”

In the traditional employer-employee context at other federal agencies, command and control have far different meanings. Most agency and civil service employees serve within that particular agency’s human resource rules and can be hired, fired, and disciplined accordingly. In contrast, the DoD is governed by a vast hierarchical structure that exerts a more coercive effect on its members: failing to obey a military supervisor’s order could result in criminal prosecution. There is simply no corollary in the civilian world or at other federal agencies.

This Part describes and analyzes the Goldwater-Nichols Act, focusing on its modification of command and control authorities. In the terminology of Professors Eskridge and Ferejohn, Goldwater-Nichols is a “super-statute” with a certain talismanic status within the halls of the Pentagon. Although it has not achieved similar super-statute appreciation outside the DoD, its effect on the DoD and its implications for civilian control of the military are enormous – underscoring why Goldwater-Nichols merits that status.

---

72 JOINT PUBLICATION 1, supra note 37, at GL-5. Under military doctrine, command and control is “the exercise of authority and direction by a properly designated commander over assigned and attached forces in the accomplishment of the mission.” Id.

73 Id. at xxii. FEATHER, supra note 24, at 82-83. “Unity of command” is defined as “The operation of all forces under a single responsible commander who has the requisite authority to direct and employ those forces in pursuit of a common purpose.” DOD DICTIONARY, supra note 8, at 248.

74 DOD DICTIONARY, supra note 8, at 41.

77 JOINT PUBLICATION 1, supra note 37.

A. The Law of the Chain of Command: The Rise of the Operational Military and the (Relative) Fall of the Administrative Military

The Goldwater-Nichols Act was born from the ashes of military operational failures. Beyond the tragedy of the Vietnam War, the failed Iranian hostage rescue attempt contributed to President Carter’s electoral defeat to President Reagan in 1980. It also exposed the DoD’s inability to conduct joint, inter-service military operations. Inter-service rivalry was not just a bureaucratic fight over funding, status, and influence – it was costing American lives.

The Goldwater-Nichols Act sought to address all of these concerns by reducing inter-service rivalry and streamlining civilian authority within the Department. Like a weary parent tired of sibling rivalry and bickering, Congress was finally stepping in and making the services get along and work together. Specifically, Goldwater-Nichols was intended to:

strengthen civilian authority in the Department... improve the military advice provided to the President, the National Security Council, and the Secretary of Defense... [and] place clear responsibility on the commanders of the unified and specified combatant commands for the accomplishment of missions assigned to those commands.

After five years of debate and significant pushback from the Pentagon, Congress passed the bi-partisan Goldwater-Nichols Act in 1986, named after Senator Barry Goldwater (R-AZ), a World War II veteran and 1964 Presidential Republican nominee and Representative Mike Nichols (D-AL), another highly decorated veteran. Passed in the shadow of these earlier operational military failures, Goldwater-Nichols’ supporters hoped to strengthen civilian control over the military, improve military operational

---

79 “Relative” is placed in parenthesis on purpose – the administrative military yields enormous power in the acquisitions process and the development of equipment and weaponry.

81 10 U.S.C. § 162 (a) (2012) (“[T]he Secretaries of the military departments shall assign all forces under their jurisdiction to... combatant commands to perform missions assigned to those commands.” See also Colonel Charles J. Dunlap, Jr., USAF, Welcome to the Junta: The Erosion of Civilian Control of the U.S. Military, 29 WAKE FOREST L. REV. 341, 351 (1994). The Joint Chiefs of Staff includes the Chairman and Vice-Chairman as well as the military heads of the Army, Navy, Air Force, Marines, and Chief, National Guard Bureau. 10 U.S.C. § 151 (2012).

82 For an outstanding overview of the legislative history and fight over Goldwater-Nichols passage, see JAMES LOCHER, VICTORY ON THE POTOMAC (2002). Senator Goldwater served as a Major General in the U.S. Air Force Reserves until his retirement from service.
effectiveness, streamline the costly and lengthy acquisitions process, and lessen inter-service rivalry through a focus on joint warfare and doctrine. Yet Sen. Goldwater’s own views at the outset of the hearing to reform the DoD called into question the continuing importance of civilian control of the American military:

The question is, can we, as a country, any longer afford a 207-year old concept that in military matters the civilian is supreme? Now, I realize the sanctity of the idea of the civilian being supreme. It is a beautiful thing to think about. The question in my mind is, can we any longer afford to allow the expertise of [military] men and women . . . to be set aside for the decisions of the civilians . . . [w]e lost in Korea, no question about that, because we did not let the military leadership exercise military judgment. We lost in Vietnam . . . if that is the way we are going to do it in the future, I think we are in trouble.

The Act accomplished three main objectives, which had the effect of empowering the operational military at the expense of the administrative military.

First, it established two chains of command within the military, effectively dividing it in two. In doing so, Goldwater-Nichols addressed how the President commands by first modifying the DoD’s operational chain of command to flow from the combatant commander to the Secretary of Defense to the President. Second, it established a parallel administrative chain of command that flows from the President to the Secretary of Defense to the Secretary of each military department (Army, Air Force, Navy). Under Goldwater-Nichols, the civilian heads of each military department possess authority and responsibility over twelve administrative functions, which serve as the administrative military’s core authorities.

---

83 See id. In the staff report to the Senate Armed Services Committee entitled Defense Organization: The Need for Change, four key “indicators of organizational deficiencies” for the period preceding Goldwater-Nichols were meticulously catalogued. U.S. CONGRESS, SENATE COMMITTEE ON ARMED SERVICES, DEFENSE ORGANIZATION: THE NEED FOR CHANGE 15-16 (1985). The four goals include: (1) operational failures and deficiencies; (2) acquisition process deficiencies; (3) lack of strategic direction; (4) poor inter-Service coordination - the programs of the individual military services do not appear to be well integrated around a common purpose that clearly ties means to goals. Id.

84 Hearings Before the S. Comm. on Armed Services, 98th Cong. 1–2 (1983) (statement of Sen. Goldwater, Member, Senate Comm. on Armed Services).

86 DEPT. DEF., supra note 7, at 25. The Chairman, Vice-Chairman and four senior military officers (Chief of Naval Operations, Commandant of the Marine Corps, Chief of Staff of the Army, Chief of Staff of the Air Force) all comprise the Joint Chiefs of Staff. The civilian Secretaries of the military departments are not members of the Joint Chiefs of Staff.
Second, Goldwater-Nichols elevated the powers of the Chairman of the Joint Chief of Staff, combatant commanders, and operational military commanders, eliminating the civilian Secretaries of the military departments and the uniformed service chiefs from any operational or war-fighting function. This greatly diminished their overall authority. The civilian Secretaries of the Military Departments are now completely outside the operational (war-fighting) chain of command and must support the combatant commander by providing all “forces” to the operational military:87

The Secretaries of the Military Departments shall assign all forces under their jurisdiction to . . . combatant commands to perform missions assigned to those commands.88

The administrative military departments do not truly command any forces although they provide a level of administrative control over personnel consistent with its twelve statutory functions. In contrast, the operational military both commands and controls. And under Goldwater-Nichols the senior uniformed combatant commanders are “responsible to the President and to the Secretary of Defense for the performance of missions assigned to that command by the President or by the Secretary with the approval of the President.”89 The combatant commanders are invested with broad authority to plan and execute the nation’s wars. And their roles and responsibilities have expanded over the years to encompass a large swath of non-military and foreign relations functions.90

Third, Goldwater-Nichols provided the Office of the Chairman of the Joint Chiefs of Staff (CJCS) with a significant boost in stature, responsibility and authority. This change coincided with General Colin Powell’s service as the first post-Goldwater-Nichols Chairman of the Joint Chiefs of Staff. General Powell, a former White House Fellow and one of the first African-American four-star generals, was a particularly influential military officer in recent American history that orchestrated the U.S. military operation in the Persian Gulf War. Both Presidents George H.W. Bush and Clinton revered General Powell’s advice and his remarkable political and military skills greatly bolstered the power of the Chairman’s office. Under Goldwater-Nichols, the Chairman, Joint Staff enjoys enormous authority and influence due to the way that orders are promulgated and communicated as well as his advisory role to the President.

88 Id.
90 See, e.g., REVERON, supra note 2, at 1-2.
Communications from the operational military combatant commands are now transmitted via the Chairman, completely bypassing the civilian service Secretaries. The CJCS translates and communicates direction and operational orders up and down the chain of command. These are sent to the combatant commands and their associated operational military commanders, many of whom are engaged in major combat operations. All operational orders originate from the Joint Staff, circumventing the individual service leaders. The Chairman and his highly qualified staff now implement Presidential policy and direction.

Relatedly, Goldwater-Nichols established the Chairman as the principal military advisor to the President, Secretary of Defense, National Security Council and Homeland Security Council. This change serves to unify and channel the military advice provided to civilian decision makers – it comes from one person (not in a diffuse nature through the individual service chiefs). By law, the Chairman has direct access to the President of the United States in providing military advice and does not need to formally coordinate this advice via the Secretary of Defense.

Finally, combatant commands have broad delegated legal authority to create new organizations and commands, so-called “Joint Task Forces,” in response to an emergency, humanitarian mission, or any other military missions. This takes place wholly independent of congressional oversight. These Joint Task Forces are of increased importance for ongoing military operations – such as operations in Syria and Afghanistan – with the combatant commands taking on more of an oversight role. For example, General Nicholson leads the U.S. task force that is part of the NATO Resolute Support Mission in Afghanistan. He reports to the Central Commander, currently General Votel.

---

91 10 U.S.C. § 163(a)(1) (2012). And the Joint Staff’s size and stature within DoD has grown significantly in recent years. LOCHER, supra note 82. Many commentators believe that the Joint Staff is comprised of the most talented individuals in government.

94 And geography plays a role in the allocation of power and authority between combatant commands and the administrative military. Most of the geographic combatant commanders are outside the United States, creating additional time-distance problems, further hindering oversight.

In sum, due to Goldwater-Nichols the operational combatant commanders’ authorities grew significantly. So, too, did the status and power of the Chairman of the Joint Chiefs of Staff. The operational military commands now have broad responsibility to plan for the employment of armed forces, respond to military contingencies, and take actions to deter conflict and command the military. The administrative military now supports the operational military, which possesses the legal and doctrinal authority to utilize all the breathtaking tools of modern warfare.

A snapshot of the evolution of the military’s chain of command is provided in Table 1, below. Two key points that need highlighting. First, the President and Secretary of Defense (both civilians) are in the lawful chain of command for both militaries. Second, under Goldwater-Nichols there are three levels of civilian oversight (President, Secretary of Defense, and Secretary of Army, Navy, or Air Force) within the administrative military’s chain of command, but only two levels of civilian oversight (President and Secretary of Defense) within the operational military’s chain of command. And the Chairman of the Joint Staff has direct access to the President for all military advice – this advice has historically focused on operational military matters. The positions in italics indicate active-duty military personnel.

B. The Law of Military “Control” and the Rise of Joint Military Doctrine Further Divide the Two Militaries

In addition to altering the chain of command, Goldwater-Nichols fundamentally changed the way the two militaries controlled their forces. Control, a military authority that is less than full command, defines the way

---

97 U.S. CONST. art. II, § 2, cl. 2.
98 The forces (people, weapons, equipment) are administratively assigned to individual services that continue to exercise operational control over them.
99 Forces now assigned to combatant commands from the individual services. 10 U.S.C. § 162 (a) (2012). The heads of each service are not in the operational chain of command.
100 Prior to Goldwater-Nichols, the senior military officer in each branch of service (Army, Navy, Air Force, Marines) exercised operational control over their individual service forces. See discussion supra Part II.A.
101 Following Goldwater-Nichols, the military services assigned all forces under their jurisdiction (with limited exception) to the combatant commands. 10 U.S.C. § 162 (a) (2012).
102 See id.
the military conducts its day-to-day activities.\textsuperscript{103} Under joint military doctrine, three of the four command authorities pertain to the operational military (combatant command,\textsuperscript{104} operational, and tactical). Just one authority – administrative control – pertains to the administrative military.\textsuperscript{105}

As a result, the operational military has \textit{two} significant lines of control emanating from its forces: Personnel assigned to the combatant commands have both an operational chain of command for war-fighting and military operations that leads to the combatant commander, as well as an administrative chain of command for administrative matters that leads to the Secretaries of the Military Departments.\textsuperscript{106} In contrast, the administrative military has just one – administrative control.

Goldwater-Nichols also increased the role and stature of joint military doctrine, defined as “fundamental principles and overarching guidance for the employment of the Armed Forces of the United States.”\textsuperscript{107} It serves as the “bridge between policy and doctrine and describes the authorized command relationships and authority that military commanders can use and other operational matters derived from [law].”\textsuperscript{108} Military doctrine is best viewed as the military’s day-to-day implementation guidance that is nested within existing statute. It acts as a sort of sub-regulation, at times with the force of law.\textsuperscript{109} If the military came with a user manual, this would be it. The Chairman of the Joint Chiefs of Staff issues joint doctrine, which takes precedence over all other doctrine to include service-specific doctrine, yet another indication of the operational military’s importance.\textsuperscript{110}

\begin{thebibliography}{110}
\bibitem{103} DO\textsc{d} DICTIONARY, \textit{supra} note 8, at 56.
\bibitem{104} In the control context, the confusingly named “combatant command” is also a control authority.
\bibitem{105} Administrative control is inextricably linked to the statutory authority and responsibility provided to the Secretaries of the military departments. See, e.g., 10 U.S.C. \textsection 5013 (2012) (defining the Secretary of the Navy’s role and responsibilities).
\bibitem{106} 10 U.S.C. \textsection 165 (b) (2012) (“The Secretary of the Military Department is responsible for the administration and support of forces assigned by him to a combatant command.”)
\bibitem{107} JO\textsc{nt} PUBLICATION 1, \textit{supra} note 37, at i. “[I]t specifies the authorized command relationships and authority that military commanders can use, provides guidance for the exercise of that military authority, provides fundamental principles and guidance for command and control, prescribes guidance for organizing and developing joint forces, and describes policy for selected joint activities. It also provides the doctrinal basis for interagency coordination and for US military involvement in multiagency and multinational operations.” \textit{Id.}
\bibitem{108} \textit{Id.} at ix.
\bibitem{109} “Joint doctrine enhances the operational effectiveness of the Armed Forces by providing authoritative guidance and standardized terminology on topics relevant to the employment of military forces. . .” DO\textsc{d} DICTIONARY, \textit{supra} note 8, at 1.
\bibitem{110} JO\textsc{nt} PUBLICATION 1, \textit{supra} note 37, at VI-3.
\end{thebibliography}
Within joint doctrine, combatant command authority is the pinnacle of military control authority and is found in both statute and doctrine. Its definition mirrors its statutory definition and includes:

full authority for a [combatant commander] to perform those functions of command over assigned forces involving organizing and employing commands and forces, assigning tasks, designating objectives, and giving authoritative direction over all aspects of military operations . . .

“Operational control” and “tactical control,” the other two command authorities the operational military possesses, perform a certain “stacking doll” function that are embedded and inherent within combatant command authority. Both are of significant importance in the conduct of military operations and can be traced to the earliest interpretations of the Commander in Chief authority. Operational control is defined as:

the authority to perform those functions of command over subordinate forces involving organizing and employing commands and forces, assigning tasks, designating objectives, and giving authoritative direction over all aspects of military operations and joint training necessary to accomplish the mission. . . it does not . . . include authoritative direction for logistics or matters of administration, discipline, internal organization or unit training.

Similarly, tactical control is inherent in both combatant command and operational control. And it is closely linked to the earliest pronouncements of Commander in Chief authority in American law. It is defined as:

[authority] . . . that is limited to the detailed direction and control of movements or maneuvers within the operational area necessary to accomplish missions or tasked assigned.

Contrast these three control authorities of the operational military with the single control authority — administrative control — that the administrative military possesses by virtue of the administrative chain of command. Administrative control is closely linked to the statutory authority placed in the civilian military service secretaries, and defined as:

---

111 10 U.S.C. § 164 (c) (2012). See also DOD DICTIONARY, supra note 8, at 39.
113 JOINT PUBLICATION 1, supra note 37, at GL-10.
114 See discussion at supra Part I.
115 JOINT PUBLICATION 1, supra note 37, at GL-11.
Direction or exercise of authority over subordinate or other organizations in respect to administration and support, including organization of Service forces, control of resources and equipment, personnel management, unit logistics, individual and unit training, readiness, mobilization, demobilization, discipline, and other matters not included in the operational missions of the subordinate or other organizations.116

To highlight this division and the importance of control, consider the case of a Navy aircraft carrier with 5,000 military service members assigned to European Command. The European operational commander has broad authority to position the aircraft carrier throughout an enormous Area of Responsibility from the Arctic Ocean to the Mediterranean Sea in response to a crisis, or however he or she sees fit. The administrative military with its separate chain of command, by contrast, exercises more limited control over the Sailors onboard the aircraft carrier for training, personnel management, health care, and other ministerial matters.

Table 2, below, presents a snapshot of the law of control for both the operational and administrative militaries.

In sum, Goldwater-Nichols increased the operational effectiveness of the military, streamlined the chain of command, and generated a revolution in joint warfare. But in doing so, it further separated the administrative military from the operational military. This has led to a weakening of civilian control over the military through a modification of the chain of command and a diminished role for the civilian Secretaries of the military departments. Indeed, under Goldwater-Nichols there is now just one civilian – the Secretary of Defense – between the operational combatant commanders charged with war fighting and the President. And the senior uniformed military officer, the Chairman of the Joint Chiefs of Staff, has direct access to the President as the principal military advisor.

Today we have a standing army at a size unimaginable to the founders and a vast, complex dual-military organization that is continuously funded by Congress. And the operational military possesses a vast footprint throughout the world, funded by Congress, reaffirming its own existence. Inertia emerges whereby Congress cannot defund the massive military without facing enormous political risk. After all, what member of Congress wants to be accused of being “against the troops” and denying funding to military members overseas?

The DoD is best understood as an extraterritorial federal agency. Pursuant to Goldwater-Nichols, geographic combatant commanders and their large staffs and subordinate commands are permanently stationed overseas. There is not one domestic-based military that responds to crisis abroad on a case-by-case basis. There are two militaries. And the operational military’s pre-existing force structure already covers the entire globe in war, peace, and everywhere in between. Indeed, the continuation of the combatant commander infrastructure facilitates a certain “systematic, unbroken, executive practice, long pursued to the knowledge of Congress and never before questioned” in the language of the Steel Seizure case. This only empowers the President, who can point to continued congressional acquiescence and its continual funding of combatant commanders as a gloss on “executive Power vested in the President by § 1 of Art. II.”

122 And at the time of this writing, the currently serving civilian Secretary of Defense, James Mattis was head of the most powerful combatant commander (Central Command) just five years ago. Biography of Secretary of Defense James N. Mattis, U.S. DEP’T OF DEF., https://www.defense.gov/About/Biographies/Biography-View/Article/1055835/james-mattis/ (last visited Feb. 2, 2018).

124 Youngstown, 343 U.S. 610-611. (Frankfurter, J., concurring)

125 Id.
III. THE OPERATIONAL AND ADMINISTRATIVE MILITARY DIVIDE’S FOUR CONSEQUENCES

The two-military divide has several consequences: I focus on four below. These consequences have been further accelerated by independent factors (discussed in Part IV). The four consequences include:

(1) Diminished civilian control of the operational military;
(2) Militarization of foreign policy;
(3) Continual bureaucratic tension between the two militaries;
(4) Administrative law’s unclear application to the operational military;

As Goldwater-Nichols established two militaries with two sets of authorities and two chains of command, congressional oversight over the operational military has lagged. Congress often remains engaged with administrative military matters, particularly defense acquisitions that can have significant impacts on employers in a member’s home district. By contrast, fundamental questions about the scope and legality of operational military operations go unanswered. To highlight one example, there has not been a new or updated Authorization for the Use of Military Force (AUMF) since 2001.

In the absence of an AUMF sunset provision or updated authorization language restricting operations, the operational military continues to fill the void left behind by congressional leadership. Indeed, the U.S. military is operating in an increasing number of countries throughout the world, conducting an ever-expanding menu of missions without the requisite amount of oversight. 126 The discussion below articulates how the administrative military’s functions are increasingly aligned with congressional interests. Further, while administrative law and the APA apply to the bulk of the administrative military’s actions, it remains unclear how, precisely, it applies to the operational military (if at all). This Part begins by first addressing the concept of “civilian control of the military” and the health of this important constitutional norm in light of the divide.

A. The Two-Military Divide’s First Legacy: Centralization and Diminished Civilian Control of the Operational Military

1. Defining Civilian Control of the Military

---

126 See, e.g., Turse, supra note 16.
In political theory, “civilian control of the military” places ultimate responsibility for a country’s strategic decision-making in the hands of civilian political leadership, not professional military officers. Samuel Huntington, the preeminent political theorist of civil-military affairs, summarized civilian control as “the proper subordination of a competent, professional military to the ends of policy as determined by civilian authority.” Civilian control of the military is better understood not as a factual matter (i.e. you have it or you don’t) but as a process that continuously ebbs and flows over time due to a variety of factors. This process changes with political norms, institutions, and personalities:

It exists along a continuum of more or less, civilian control from the extremes of countries ruled by military establishments or that experience periodic coups d’etat or frequent direct or indirect military intervention in politics to those that do not even possess standing military forces.

The United States has a remarkably strong history of civilian control of the military since the nation’s inception. This can be traced to the earliest days of the Republic and George Washington’s willingness to cede power to the Continental Congress upon his defeat of the British Army. But America’s strong tradition of civilian control is not a foregone conclusion. It requires constant evaluation, to include weighing the relative influence “the military and civilians have in the decisions of state concerning war, internal security, external defense, and military affairs.”

Within political theory, military accountability to the legislative branch is essential to the healthy maintenance of civilian control over the military. Accountability to the legislative branch, in turn, helps ensure

---

127 Feaver, supra note 24. See also Samuel Huntington, The Soldier and the State (1959).

128 Huntington, supra note 127, at 80-85. Huntington also noted that despite numerous historical references, a satisfactory definition of civilian control of the military had yet to emerge. He divided the concept into two modes of control: subjective and objective. Subjective civilian control “maximizes the power of civilian groups in relation to the military via civilian institutions and constitutional norms. Objective civilian control “professionalizes” the military by consigning the armed forces exclusively to the apolitical task of the management of violence.” Id. at 80-85.

130 Id.

132 Id. Professor Kohn posits that the foundations of democratic civilian control of the military rests on four requirements: (1) democratic governance and rule of law; (2) accountability to public institutions; (3) effective countervailing power; and (4) a military tradition committed to neutrality.

133 Id.
accountability to the civilian populace. This fosters public discussion, debate, transparency in military affairs, clarity on military expenditures, and investigation and inquiry into military matters. This authority must be actively exercised, however, lest it lie fallow, undermining civilian control. Strong legislative oversight over the military actually "strengthens national defense by reinforcing military identification with the people and popular identification with the military." 

The judiciary also has an important role in civilian control of the military. Within administrative law and § 706 of the APA, citizens can bring citizen suits against agencies for violating the "arbitrary and capricious standard." As discussed in greater detail below, the administrative military is largely subject to such suits based upon the definition of "agency," while it is unclear how the APA applies to operational military actions.

Congress disproportionately exercises its authority and control over the administrative military at the expense of operational military oversight. Further, once Congress delegates power and statutory authority to the operational military, it is difficult to get back. Inertia sets in. Consider the case of Special Operations Command, ("SOCOM") still the only military command established by Congress pursuant to an amendment to the Goldwater-Nichols Act in 1987. Or consider the case of Africa Command, the nation’s newest geographic combatant command, established in 2007. Since its inception, its size, scale, and influence have grown significantly – its headquarters staff now exceeds European Command’s. And Africa Command has rapidly expanded its operation (often with the help of Special Operations Command) on the continent of Africa itself. Once created, bureaucracies fight for status, funding, and influence, consistent with normal bureaucratic behavior – the military bureaucracy and its combatant commands are no different.

2. Goldwater-Nichols’ Emphasis on Centralization

134 Id. 135 Id. “The judiciary plays a supporting, but nonetheless indispensable role, holding military individuals personally accountable in ways that prevent military interference in politics and assure that officers know that they will be punished for violations of the law.” 136 Id. 137 10 U.S.C. § 167 (2012). 138 U.S. GEN ACCOUNTING OFFICE, GAO-16-652R: DEFENSE HEADQUARTERS 12 (2013). 139 See JAMES Q. WILSON, ON BUREAUCRACY: WHAT GOVERNMENT AGENCIES DO AND WHY THEY DO IT (1989); WILLIAM A. NISKANEN, JR., BUREAUCRACY AND REPRESENTATIVE GOVERNMENT 38, 71 (1971) (suggesting that military strategy has been driven by budget considerations).
Goldwater-Nichols furthered the centralization of the operational military’s power to include the streamlining of military advice via one person: the Chairman of the Joint Chiefs of Staff. The Chairman of the Joint Chiefs now has a pivotal role as the single voice and provider of legal advice to the President, Secretary of Defense and National Security Council. In the operational military context, the uniformed members of the Joint Staff are incentivized to reach a certain baseline level of consensus in their advice to the Chairman as they lack a legal mechanism to directly advise the President and Secretary of Defense. As Goldwater-Nichols discourages inter-service rivalry, the role and importance of dissent was minimized. Under this centralized model, the President and civilian decision-makers receive one voice of advice from the entire military on operational military matters despite an increasingly complex menu of national security issues. Each service provides their senior military officer to sit on the Joint Chiefs of Staff, but any dissent is filtered through the Chairman.

Goldwater-Nichols also established a personnel incentive structure where joint assignments within operational military commands such as the Joint Staff and combatant commands are highly sought-after and a legal prerequisite for promotion to flag and general officer. Career-minded officers are competing to “punch” a “joint ticket” within the operational military. Today, many believe that the 1,000+ uniformed members of the Joint Staff are the single most talented and effective staff in the entire U.S. government hand-chosen by the Chairman and out-working many of their civilian counterparts. It is an enormously prestigious place to work within the Pentagon’s corridors, due in large part to the incentive structure established by Goldwater-Nichols. The Chairman has the final say, too, on who joins his staff. The Secretaries of the military departments merely nominate the officers – the Chairman ultimately selects who serves on his staff.

The centralization of military advice streamlines information for civilian decision-makers, but it also imposes institutional costs. As Judge Posner and Professor O’Donnell have articulated in the context of intelligence reform, centralization reduces competition between agencies, places an excessive focus on consensus, and less consideration of low-probability yet

---

140 Service chiefs could, of course, bypass the legal advice structure established by Goldwater-Nichols but that comes with obvious career and professional risks.
144 Id.
No longer is inter-service rivalry the defining feature of the operational military; unification and centralization are the defining features. While inter-service rivalry certainly had its costs (and still exists at some diminished level), it has substantively gone away. But so, too, have its positive and powerful counterbalancing effects within the military. Inter-service rivalry has been replaced by a single, unified military voice, and with it increased military authority and influence.147

3. Congress Actively “Makes Rules and Regulations” for the Administrative Military But Not the Operational Military

As discussed in Part I, Congress has an important constitutional role “to make Rules for the Government and Regulation of the land and naval Forces.”148 This is not limited solely to the administrative land and naval Forces – it also includes the entire defense establishment and operational military organization. While Congress exercised its constitutional authority through the passage of the National Security Act and Goldwater-Nichols Act, it has played a considerably more passive role in the creation and modification of the operational military structure that is continually in the face of emerging threats.

Indeed, under existing statutory authority and doctrine, the President has the sole authority to create entirely new combatant commands (and subordinate war-fighting joint task forces) without explicit congressional approval.149 Further, the President may independently revise the mission, responsibilities or force structure of an existing combatant command independent of Congress.150 In doing so, the President must notify Congress within 60 days, and this notification requirement is suspended during “hostilities or imminent threat of hostilities.”151 In turn, the combatant commander can create Joint Task Forces and subordinate commands without congressional approval.152

In addition, Congress is largely absent from the development of the increasingly important Unified Command Plan (UCP), the blueprint for the operational land and naval forces that establishes and modifies the

147 Dunlap, supra note 81, at 372. Samuel Huntington asserted, “[As the officer’s corps becomes more unified, this will increase the military’s authority with regard to other institutions of government . . .]” HUNTINGTON, supra note 127, at 87.
151 Id.
152 JOINT PUBLICATION 1, supra note 37, at IV-1.
boundaries of the geographic combatant commands. The Chairman of the Joint Chiefs of Staff prepares the UCP, which as evolved to become an executive branch document signed by the President that establishes, defines and describes the role of each combatant commander.\textsuperscript{153} The UCP effectively implements the statutory guidance for combatant commands found in the National Security Act and Goldwater-Nichols Act, driving military policy and establishing the operational military’s governing infrastructure.\textsuperscript{154} Experts have described the UCP as a document “that has significant impact on how [combatant commands] are organized, trained and resourced – areas over which Congress has constitutional authority.”\textsuperscript{155} But its development is nested within the operational military and executive branch with minimal input or oversight from Congress. Why?

To highlight the importance of the combatant command process, just last year a new combatant command – Cyber Command – was established with fairly minimal public debate. Perhaps not surprisingly, at the time of this writing, Cyber Command is already seeking greater operational authority to launch offensive cyber operations.\textsuperscript{156}

Finally, while the combatant commanders provide annual reports to Congress and testify annually, the administrative military leaders testify in front of Congress in much higher numbers. Indeed, not only is the frequency of administrative military testimony (e.g., civilian Secretaries of the Military

---

\textsuperscript{153} The Department of Defense defines the Unified Command Plan (UCP) as:

The document, approved by the President, that sets forth basic guidance to all unified combatant commanders; establishes their missions, responsibilities and force structure; delineates the general geographic area of responsibility (AOR) for geographic combatant commanders; and specifies functional responsibilities for functional combatant commanders.

\textsc{DOD Dictionary, supra} note 8, at 385

\textsuperscript{154} Numerous questions unfold when looking at the UCP that one would think would invite congressional involvement. Here are but a few: Israel is part of European Command, not Central Command. Africa Command is the newest combatant command but it does not include Egypt. Special Operations Command is not \textit{geographically} restricted. They can flow into and out of the myriad geographic commands, a source of great operational flexibility but can create tension between special operators and the geographic combatant commanders.

\textsc{Feickert, supra} note 64. As discussed in Part I, Congress has the constitutional authority to “raise and support Armies,” “provide and maintain a Navy,” and “to make rules for the Government and Regulation of the land and naval Forces.” U.S. \textit{Const.} art. I, § 8 cl. 12-14.

\textsuperscript{155} Patrick Turner, \textit{A Fight is Brewing Between Congress and the Military Over Cyber War}, \textsc{Defense One} (Nov. 16, 2017), \url{http://www.defenseone.com/technology/2017/11/fight-brewing-between-congress-and-military-over-cyber-war/142616/?oref=d-topstory}. Its cyber capability is progressing at a rapid pace, achieving full cyber capability one year ahead of schedule. \textit{Id.}
Departments and their military service chiefs) significantly higher than operational military commander testimony, but the purpose and nature of the testimony is qualitatively quite different. The administrative military is often on the receiving end of congressional investigation and inquiry while the operational military commanders are afforded a remarkable level of deference. The operational military is often advocating for increased funding in that commander’s Area of Responsibility. Indeed, combatant commanders’ congressional testimony “can sway Congress and embarrass or impede their administration.” To highlight one example, the four-star combatant commander with oversight responsibilities over South America testified in front of congressional committees 17 times in an attempt to advocate for increase funding for drug interdiction efforts.

Under a principal-agent model of civil-military relations, each agent (military) competes with their principal (Congress or the President) for independence and influence. And each geographic combatant commander competes with one another for the administrative military’s forces, equipment, and personnel. After all, each Army battalion, Navy carrier strike group, or Air Force fighter squadron can only be in one place at one time. This sets up a dynamic whereby the geographic combatant commands advocate strongly for their respective regions of the world at the potential expense of other regions. Under Goldwater-Nichols, combatant commanders enjoy a special status within the DoD budgetary process: the Secretary of Defense is required to submit to Congress a separate budget proposal for each combatant command.

Geographically, today’s operational military often operates far removed from Congress in some of the most remote parts of the world. Further, operational military decision-making is much more likely to be classified. And operational military commanders have a comparative information advantage over their congressional principles that are increasingly uninformed about operational decision-making, leading to further bureaucratic drift.

Finally, the administrative military competes with the operational military. Increasingly, the administrative military’s fight for resources is

---

157 Supra note 13.
159 Christoper J. Fettweis, Militarizing Diplomacy, in AMERICA’S VICEROYS 47, 53 (Derek Reveron, 2004).
160 See generally Feaver, supra note 24.
162 Id.
aligned with congressional interests in job creation and resources, discussed below.

In sum, when discussing civilian control of the military, it is important to inquire about civilian control over which military. Operational military authorities are increasingly delegated to the executive and the vast operational military apparatus. This trend has only intensified during the Trump Administration.\(^\text{163}\) Congress remains interested in military matters, but is disproportionately focused on the nitty-gritty details of administrative military functions, such as the vast, inefficient, and costly military acquisitions process discussed below. Today, the administrative military is the outsized focus of Congress, D.C. policymakers, and the vast military contracting apparatus eager to tap into valuable DoD acquisition and procurement funds. And each year Congress passes a National Defense Authorization Act (NDAA) that largely focuses on core administrative military matters.\(^\text{164}\)

So how does Congress provide oversight over operational military matters? The most powerful tool remains funding cutoffs that target specific military operations.\(^\text{165}\) But absent an express appropriations prohibition on a specific military operation, the already established operational military structure located throughout the world continually tips the balance in favor of the Commander in Chief in operational matters. Further, combatant commanders may continually capitalize upon their statutory authority to establish subordinate commands – the all-important joint task forces – that are even further removed from administrative law and congressional oversight.\(^\text{166}\)

**B. The Two-Military Divide’s Second Legacy: The Militarization of Foreign Policy**

Under the operational and administrative military divide, the geographic combatant commanders now exercise an increasingly important

---

\(^\text{164}\) See supra note 14 and accompanying text.

\(^\text{166}\) John Yoo, *Administration of War*, 58 DUKE L.J. 2277, 2283-92 (2008). Joint task forces were set up in military operations in Iraq, Afghanistan, and Libya. They are “constituted and so designated by the Secretary of Defense, a combatant commander, a sub-unified commander, or an existing joint task force commander.” DoD Dictionary, supra note 8, at 132.
role in America’s foreign policy.\textsuperscript{167} They are increasingly seen as “effectively displac[ing] American ambassadors and the State Department as the primary instruments of American foreign policy.”\textsuperscript{168} The combatant commanders’ core mission includes the broadly defined “military to military” engagement and fostering close relations with host nations (many of them economic beneficiaries of DoD’s overseas apparatus). And the status of the geographic combatant commanders has only increased since Goldwater-Nichols’s passage in 1986. Indeed, the capstone billet for senior officers is now serving as the head of a geographic combatant command or Chairman of the Joint Chiefs of Staff, not as the heads of the Army, Navy, Air Force, and Marines.

For example, General James Jones departed his administrative military position as Commandant of the Marine Corps to serve as the European Commander – demonstrating that even the hallowed position of Commandant was a mere stepping-stone to something bigger in the operational military.\textsuperscript{169} While the military has always conducted a host of activities that are closer to traditional foreign policy functions, their role in diplomacy has grown substantially in the recent past.\textsuperscript{170}

This trend will persist at least for the near term, due to actions within the Trump Administration that amplify the operational military’s foreign policy influence. The military is increasingly called upon to perform traditional foreign policy functions and fill the void left behind by massive personnel shortages at the State Department.\textsuperscript{171} Geographic combatant commanders are already present throughout the world and possess comparably large staffs and deep relationships with the nations in their region. State Department ambassadorships remain unfilled. Diplomats are resigning en masse, never to be replaced. The pre-existing massive overseas operational military apparatus becomes the \textit{de facto} voice of both the American military and diplomacy. The combatant commanders and their staffs provide continuity – albeit a military-focused one – through changeovers in administrations.

Military geographic combatant commanders also have several strategic advantages over the State Department and its diplomatic corps. Ambassadorships and foreign policy officials overseas are assigned to a single nation. And ambassadorships often remain vacant for extended periods. Combatant commands are \textit{never} vacant. Further, military combatant

\item \textsuperscript{169} Id. at 1-2.
\item \textsuperscript{170} See generally PRIEST, \textit{supra} note 3.
\item \textsuperscript{171} Within military doctrine, the United States employs all the instruments of national power under the “DIME” paradigm (diplomatic, informational, military, & economic). JOINT PUBLICATION 1, \textit{supra} note 37, at 1-4.
\end{itemize}
commanders have a broader scope and can focus on enormous geographic regions of 50+ nations within their respective Area of Responsibility.\footnote{European Command Fact Sheets, U.S. EUROPEAN COMMAND http://www.eucom.mil/about/history/fact-sheets (last visited Feb. 2, 2017).} Their permanent headquarters staff often exceeds 1,000 military officers and subordinate commands under their control far exceed that number.\footnote{U.S. GEN. ACCT. OFF., GAO-16-652R, DEFENSE HEADQUARTERS 12 (2013).}

Beyond their headquarters staffs, military combatant commanders have military attachés in each nation that work hand in hand with host nations and their foreign policy apparatus. Their relationships run deep. Foreign Military Sales and the allure of additional military funding incentivize foreign government to strengthen those relationships.\footnote{REVERON, supra note 2, at 4–7, 101.} There is a blurring of the lines between traditional military-to-military engagement and more traditional diplomatic functions. Indeed, combatant commanders have an important voice on such matters and they are extremely well funded. And they have at their disposal an enormous personal staff and their own “mini-airline” to include a fleet of military aircraft with secure communications. Combatant commanders can be whisked away at a moment’s notice anywhere they please. When foreign governmental leaders look at American actors overseas and assess who is truly well funded and resourced, the geographic combatant commanders come out on top.

Consider the case of European Command, which has been in place since World War II with an enormous engagement mission. Just 18 combatant commanders have led European Command since the end of World War II.\footnote{European Command Fact Sheets, U.S. EUROPEAN COMMAND http://www.eucom.mil/about/history/fact-sheets (last visited Feb. 2, 2018).} How many individual U.S. ambassadorships across Europe have been held throughout that timeframe? The headquarters staff alone has a permanent presence of over 1,500 personnel; that number triples when taking into subordinate staffs. Today, there are 50,000+ active-duty personnel in Europe spread over 250 pieces of individual real estate.\footnote{Id.}

Finally, geographic combatant commanders increasingly play a leadership role within the executive branch and foreign relations more generally following their retirement from the military. Currently General Mattis (former Central Commander) is the Secretary of Defense and General James Kelly (former Southern Commander) is the White House Chief of Staff. Admiral Harry Harris (head of Pacific Command) is being considered as America’s newest ambassador to Australia. A former Pacific Commander (Admiral Preuher) served as the U.S. ambassador to China upon his
retirement.177 General Zinni (former Central Commander) served as U.S. special envoy to the Middle East and General Jones (former European Commander) who served as President Obama’s National Security Advisor. And of course the first Chairman of the Joint Chiefs of Staff after Goldwater-Nichols, Colin Powell, served as Secretary of State.178

C. The Two-Military Divide’s Third Legacy: An Increasingly Divided Military, Undermining Operational Effectiveness

First, the two-military divide leads to continual, bureaucratic tension between the administrative military leaders and the operational, uniformed military commanders. Consider this comment from a DoD expert on the dual administrative and operational military divide:

Service chiefs are, by far, the most important people in the [Pentagon] when it comes to physical things, real things people, equipment, training, et cetera. Service chiefs are all-powerful. When it comes to operations in the field, they're not in the game . . . we've got two different channels where power is exercised, but it only comes together at the Secretary [of Defense].179

As discussed in Part II, under Goldwater-Nichols there are two distinct chains of command with the administrative military legally required to provide forces to the operational military.180 The parallel chains of command only meet at the very top of the DoD at the Secretary of Defense. This places an enormous strain on one person who suffers from continual “bandwidth” problems as the critical intermediary between the two militaries and must continuously bridge the operational and administrative military divide while reconcile their competing interests.

As new, more expensive weapons are produced, older weaponry continues to be maintained. The maintenance cost for the older weaponry and material is often much, much lower. So a perverse incentive emerges to fund new equipment and weaponry, regardless of whether the operational military even needs it. This has led to bizarre instances where the DoD receives weapons and equipment that it hasn’t asked for and doesn’t want.181 Consider the following two examples.

---

177 REVERON, supra note 2, at 2.
178 Id.
179 Goldwater-Nichols Hearing, supra note 33.
181 GATES, supra note 20.
First, the JSF case study highlights a new phenomenon within the DoD: the administrative military provides forces to the operational military but this occurs outside a direct command and control relationship and a clear accountability mechanism. Again, it is only the Secretary of Defense who has the legal authority to referee disputes between the two militaries, but congressional interests can hinder even his authority. While the acquisition, testing, and development of the JSF is a core administrative military function, its eventual day-to-day operation overseas under the command of a combatant commander is an operational military function. And the administrative military is often directly unaccountable to the operational military: under Goldwater-Nichols, they are not in the same direct chain of command. While the operational military is focused on operational military effectiveness on the battlefield above all else, the administrative military leaders have significant constraints and a far different incentive structure. This includes the watchful eye of Congress, many of whom are interested in economic benefits to their congressional districts.

This bureaucratic tension between the operational and administrative military came to the fore in congressional hand wringing over the A-10 “Warthog” attack jet, a Vietnam-era plane that was widely lauded by operational military commanders. Yet Congress and administrative military leaders viewed the A-10 with suspicion. Why? The JSF was on track to fully replace the A-10 once it was out of service. Keeping the A-10s in service could lower the number of JSFs that the DoD purchased.

A bureaucratic struggle ensued. As the JSF came into production, Congress sought to phase out the Air Force’s use of the A-10 earlier than desired by the operational military commanders. A standoff emerged between the Air Force, Congress, and operational military commanders. While it was ultimately resolved and the A-10 was given a temporary reprieve, its long-term future still remains very much in doubt.\footnote{Thomas Gibbons Neff, The A-10 Get a Lease on Life—at Least Through 2017, WASH. POST, Jan. 14, 2016, at A1.}

Second, former Secretary of Defense Robert Gates was continually frustrated by the challenges he experienced during his tenure as Secretary of Defense and head of the two militaries, as evidenced by his efforts to force the administrative military to provide responsive and necessary equipment and weaponry to the operational military engaged in war-fighting.\footnote{GATES, supra note 20.} Fundamentally, these challenges can be traced to the military’s legal architecture. Due to a quirk of Goldwater-Nichols, the Secretary of Defense must approve the transfer of all forces between combatant commands,
regardless of their size or mission. Gates was increasingly frustrated with DoD’s agency design – this took too long and did not properly take into account the real-time force requirements of the operational military. For example, upon a visit to the operational military, then-Secretary Gates saw firsthand the desperate need for soldiers in Afghanistan to receive Mine Resistant Armored Personnel (MRAP) carriers to protect their lives. Much to his dismay, Gates had to work creatively outside the existing force assignment system designed by Goldwater-Nichols to ensure that the soldiers in the field received the equipment that they needed.

In sum, the Secretaries of the military departments (and Congress) are disproportionately focused on the long-term defense acquisitions process that addresses future threats at the expense of meeting current threats. The combatant commander receives forces from the individual services, but the services are not directly accountable for the type of equipment and personnel assigned. This creates an administrative-operational disconnect in which the operational real-time requirements needs are often out of sync with the administrative military, a fourth legacy of the two-military divide.

D. The Two Military’s Fourth Legacy: Administrative Law and the APA’s Uneven Application to the Two Militaries

While the judiciary has historically been the least influential of the three branches in ensuring civilian control over the military, judicial review via the APA remains an important vehicle in ensuring accountability over all federal agencies, and DoD is no exception. Indeed, in citizen suits – particularly in environmental law – ensure a continual level of accountability between the military and the nation’s citizens that it is sworn to protect. The APA provides that connective tissue between the citizenry and the military (via the judiciary). In light of DoD’s unique mission, and the two-military divide, a fundamental question arises: Should administrative law and the APA treat the operational military differently from the administrative military?

Despite the DoD’s size, budget, and idiosyncratic mission, administrative law scholarship has “generally passed over the study of the

---

184 10 U.S.C. § 162 (a)(3) (2012) (mandating that any force assigned to a combatant command may be transferred from the command pursuant to the authority of the Secretary of Defense). Indeed, transferring forces between combatant commands is held at the highest level of the DoD.

185 GATES, supra note 20.

186 MCINNIS, supra note 80 (quoting Secretary of Defense Robert Gates who stated that “we have a military designed to plan for war, not fight a war.”).

187 Dunlap, supra note 81, at 368-70.
military in favor of the domestic agencies.”¹⁸⁸ Indeed, very little legal scholarship has addressed the APA’s applicability to the DoD (despite its status as the largest federal agency).¹⁸⁹

The APA (passed in 1946, just one year before the National Security Act) provides for judicial review over agency actions and sets out procedures that agencies must follow when promulgating rules and adjudicating conflicts.¹⁹⁰ The APA has been described as a “mini-Constitution” and widely praised as a mechanism to help ensure democratic accountability and oversight over federal agencies. But the APA was designed for a far different time and does not adequately take into account: (1) DoD’s existing legal architecture and two-military divide; and (2) the complexity of modern military operations to include the numerous military activities that take place overseas outside of war. The APA was better suited to regulate military activities, but it has not kept pace with changes to the massive military organization and the nature of modern warfare. The result: there is now a disconnect between the APA’s text and its ongoing applicability to the modern military organization.

1. The APA’s Definition of “Agency” Clearly Applies to the Administrative Military But Does Not Clearly Apply to the Operational Military

The APA broadly defines “agency” as “each authority of the Government of the United States, whether or not it is within or subject to review by another agency . . .”¹⁹¹ Congress, courts, and governments of the United States are specifically exempt from the agency definition.¹⁹² While the President is not specifically exempt, courts have routinely held that the President is not an agency within the APA’s meaning, of particular importance for military matters due to the President’s role as Commander in Chief.¹⁹³

¹⁸⁹ The rare exceptions include Kathryn E. Kovacs, Leveling the Deference Playing Field, 90 ORE. L. REV. 583 (2010) (arguing that there is no basis for courts to give greater deference to the military) and Jonathan Masur, A Hard Look or a Blind-Eye, 56 HASTINGS L.J. 441, 512 (2006).
¹⁹⁰ See, e.g., JAMES RASBAND, JAMES SALZMAN, & MARK SQUILLMAN, NATURAL RESOURCES LAW 223 (2009)(praising the many virtues of the APA in democratic governance).
However, “agency” includes the Secretary of Defense and the civilian Secretaries of the Military Departments who remain subject to suit under the APA. This conclusion is reaffirmed by the text of the APA’s FOIA section, which specifically applies to any “executive department or military department.”194 And the Secretary of Defense and civilian Secretaries of the Military Departments are routinely sued.195 Because the APA “agency” definition clearly applies to the civilian heads of the administrative military, it follows that APA litigation is focused on administrative military functions via lawsuits against the Secretary of Defense or civilian Secretaries of Military Departments. For example, the Secretaries of Defense and Military Departments were the defendants in numerous lawsuits challenging the forthcoming change in transgender service policy.196

It is less clear whether the heads of the operational military (combatant commands and joint task force commands) are an “authority of the Government of the United States . . .” within the APA’s agency definition. Although the operational military is not specifically exempt from judicial review, it remains unclear how the APA applies to the operational military. No lawsuit to date has held that an agency includes a combatant commander or subordinate operational commander, although a suit against the Secretary of Defense as the head of the operational military remains possible.197

In addition, much of the operational military’s decision-making (particularly by the geographic combatant commanders) takes place outside the United States, where it is not clearly subject to the APA’s reach, which

196 For example, the Secretary of the Military Departments and the Secretary of Defense were sued pursuant to the transgender personnel policies. For a timeline of these actions, see Mark P. Nevitt, A Tumultuous Year for Transgender Service Members, PENN REG. REVIEW, Jan. 31, 2018, https://www.theregreview.org/2018/01/31/nevitt-tumultuous-year-transgender-service-members/ (last visited Feb. 2, 2018).

197 Nor have they held otherwise. The law remains unsettled on this point.
lacks a clear extraterritorial application. Finally, for an APA suit to come forward, actual knowledge of an agency action is required, a particular problem for operational military matters that occur outside the United States, are out of sight, and are often classified. Secrecy is itself a form of regulation, bypassing traditional forms of judicial review or civilian control.

United States v. Daugherty, a non-precedential opinion, remains the one federal case addressing the peculiarities of the APA and the Goldwater-Nichols two-military divide. In Daugherty, a service member attached to an operational military command in Spain filed a tort claim against the Secretary of Defense and Navy (among others). He asserted that the Goldwater-Nichols Act divested the Navy of any type of authority over him. The Tenth Circuit rejected that argument, focusing instead on the Act’s establishment of the administrative chain of command that served as an umbilical cord between the Navy and the service member. This administrative chain of command, as discussed in Part II, runs from the military member to the Secretary of the Navy and the Secretary of Defense. The court did not specifically address the combatant commander’s role – in Daugherty only administrative functions that could be traced back to the Secretaries of the Military Departments were the subject of the judgment. There was no discussion of the operational chain of command and whether the European Commander and the operational military leadership is subject to suit.

To be clear, I am not advocating that the APA should apply to truly operational military matters such as the tactical movement of forces or military raids. But there is an expanding menu of activities undertaken by the operational military that have administrative components – hiring and firing personnel, responding to FOIA requests, issuing routine guidance – that is outside the formal rulemaking process and may not be subject to judicial review. Hence, to borrow somewhat from the nomenclature adopted by Professors Adrian Vermeule and David Dyzenhaus, an institutional hole emerges within the operational military. Any function associated with the three different types of operational military control (combatant command, 

---

204 10 U.S.C. § 164(c)(A)-(G) (2012). Under joint doctrine, this includes “[n]ontransferable command authority which cannot be delegated to perform those functions
The Operational and Administrative Militaries– Nevitt (DRAFT)

operational control, or tactical control\textsuperscript{205} remains outside the APA’s reach. How does administrative law account for these activities? To date courts have yet to “pierce the operational veil” in applying the APA to such matters.\textsuperscript{206} Perhaps this stems from in confusion about the two-military chain of command or deference to military operational commanders. Regardless of the reason, it appears that the administrative military will continue to be subject to APA while courts will provide additional (if not absolute) deference to the operational military.

2. APA Military Exemptions and Military Deference as Applied to the Operational and Administrative Militaries

Since its passage in the aftermath of World War II, the APA has specifically exempted certain military activities based upon \textit{when} they are occurring and \textit{what} they do.\textsuperscript{207} Despite repeated calls to address or reform the APA’s military exemptions, they persist and are virtually unchanged from their original form.\textsuperscript{208} These express exemptions include “military authority exercised in the field in the time of war or in occupied territory” and “military or foreign affairs \textit{functions} of the United States.” They amount to APA “black holes” where military activities occur outside the constraints of judicial review.\textsuperscript{209}

The terms “military authority” and “in the field in the time of war” lack a clear definition (and we have not had a formal declaration of war since 1943). As this provision has not been modified since 1946, courts have struggled to apply this exemption to modern conflicts.\textsuperscript{210} As a fundamental

---

\textsuperscript{205} “The authority over forces that is limited to the detailed direction and control of movements or maneuvers within the operational area necessary to accomplish missions or tasks assigned.” DOD DICTIONARY, supra note 8, at 226.

\textsuperscript{206} The definition of combatant command includes an administrative component: “coordinating and approving those aspects of administration and support (including control of resources and equipment, internal organization and training) and discipline necessary to carry out missions assigned to the command . . .” 10 U.S.C. § 164 (c)(F) (2012).

\textsuperscript{207} 5 U.S.C. § 551 (A)-(H) (2012). The APA also similarly exempts courts-martial and military commissions. Id. \textit{See also Kovacs, supra} note 186 (arguing that there is no basis for courts to give greater deference to the military); Masur, supra note 189, at 512.

\textsuperscript{208} Arthur E. Bonfield, \textit{Military and Foreign Affairs Rulemaking Under the APA}, 71 MICH. L. REV. 221 (1972).

\textsuperscript{209} Vermeule, \textit{supra} note 29, at 1107-1117.

\textsuperscript{210} \textit{See}, e.g., Doe v. Sullivan, 938 F.2d 1370 (1991) (determining that the decision to use unapproved drugs on servicemen in combat during the Persian Gulf War was subject to judicial review). \textit{See also} Thomas R. Folk, \textit{The Administrative Procedure Act and the Military Department}, 6 J. NAT’L ASS’N OF ADMIN. L. JUDGES 109, 114 (1986).
matter, modern military activities cannot be neatly placed in clear legal categories. The division between war and peace remains murky.211

The APA’s rulemaking and adjudications section exempts “military or foreign affairs functions of the United States.”212 The term “military function” is of central importance but it, too, lacks a clear statutory definition. Despite this exemption’s broad implications as applied to DoD, it has not been the subject of much legal scholarship. Nor have judicial decisions provided helpful guidance on its precise meaning.213 The APA broadly excludes from review agency action “committed to agency discretion by law.”214 This catchall exclusion has been used to preclude review in national security contexts.215

Perhaps not surprisingly, the DoD has often sought a broad interpretation of these APA exemptions. This is somewhat understandable – it seems absurd to subject critical war making and tactical decision-making to judicial review.216 But courts will always afford a certain amount of deference to the DoD in reviewing its actions, regardless of its activity.217

The question remains, what level of deference should be afforded to the expanding menu of military actions performed by an operational military commander outside of an armed conflict such as training, engagement, or routine administrative functions (FOIA, hiring and firing, etc.) embedded within the command? Again, the text of the APA contains limited guidance. Indeed it is unclear what level of deference a court can or should afford to the operational military vis a vis the administrative military and how to weigh

---

211 The last time the United States Congress exercised its constitutional authority to do so was 1943 in the middle of the Second World War when the U.S. declared war against Bulgaria, Hungary, and Romania in 1942.
213 And this exemption has only been comprehensively addressed by a single law review article dating back forty years. See Arthur Bonfield, Military and Foreign Affairs Function Rulemaking Under the APA, 71 MICH. L. REV. 222 (1972) (arguing that based on the plain meaning, the exemption applies to the extent that there are “clearly and directly involved matters specifically fitted for, appropriate to, or expected of the armed forces in light of their peculiar nature and qualifications”).
215 See, e.g., Riverkeeper Inc. v. Collins, 359 F. 3d. 156 (2d Cir. 2004).
216 See Wu Tien Li-Shou v. United States, 777 F.3d 175 (4th Cir. 2015) (refusing to call into question the command structures of an existing military operation).
217 See, e.g., Gilligan v. Morgan, 413 U.S. 1, 10 (1973) (holding that the court is not well positioned to interfere in composition, training, equipping and control of the military force, core administrative military functions); Chappelle v. Wallace, 462 U.S. 296, 300 (1983) (court will “hesitate long” before interfering in relationship between military personnel and their superior officers).
the relevant factors in determining the deference afforded. 218 And rules regulating military functions as applied to military contractors are exempt from following the APA rule making process. 219

*Doe v. Sullivan* may offer some guidance. In *Doe*, a service member used the APA to challenge the HHS Secretary’s decision to allow DoD the use of an unapproved drug in the event of a chemical nerve gas attack. 220 In dismissing the service member’s complaint, the court refused to apply the “military authority” exception, seeing this decision as not part of a military exigency. Nevertheless, the court hinted in dicta of a more generalized Commander in Chief exemption that if applied broadly would eliminate an enormous swath of operational military decisions (as opposed to statutory delegation based on other constitutional provisions). 221 This would appear to immunize administrative actions that rely upon the President’s Commander in Chief power, an authority wholly independent of APA oversight with an outsized effect on operational military matters:

Plaintiffs seek review under the Administrative Procedure Act . . . of a rule published in the Federal Register by the Secretary of HHS, who is not part of any military chain of command . . . when he adopted the rule [the Secretary] did not purport to be exercising the President’s powers as Commander in Chief. . . . 222

Courts have struggled mightily to apply a consistent and uniform standard when determining the level of deference that should be afforded to the military. For example, in *Gilligan v. Morgan*, the Court stated:

---

218 In a Supreme Court decision dating from 2006, Justice Breyer struggled with the level of deference that should be afforded to the military in *Winter v. NRDC*. “I don’t know anything about this. I’m not a naval officer. But if I see an admiral come along with an affidavit that says . . . you’ve got to train people [when there are certain types of oceanographic conditions] all right, or there will be subs there with all sorts of terrible weapons, and he swears that under oath. And I see on the other side a district judge who just says, you’re wrong, I then have to look to see what the basis is, because I know that district judge doesn’t know about it either.” Oral Argument of Justice Breyer, Winter v. Natural Res. Def. Council, Inc., 129 S. Ct. 365 (No. 07-1239), http://www.supremecourtus.gov/oral_arguments/argument_transcripts/07-1239.pdf. [hereinafter Breyer Oral Argument].

219 Independent Guard Ass’n, Local No. 1 v. O’Leary, 57 F.3d 766 (9th Cir. 1995) (construing the military function narrowly as applied to the Department of Energy while noting that “to our knowledge, no court has ever considered whether the military function exception applies to civilian contractors”).

222 *Id.* at 1380.
It is difficult to conceive of an area of governmental activity in which the courts have less competence. The complex, subtle, and professional decisions as to the composition, training, equipping, and control of a military force are essentially military judgments, subject always to the civilian control of the legislative and executive branches.\textsuperscript{223}

The military deference doctrine is premised on the legislative branch exercising civilian control.\textsuperscript{224} But as discussed in Part III.A., there has been a continual derogation of civilian control over operational military matters – how should administrative law account for this?

And for the first time in modern history, the Supreme Court lacks active-duty veteran representation among its members.\textsuperscript{225} While it still remains unclear what impact this will have on the Court’s application of the military deference doctrine, the Court’s firsthand military knowledge has disappeared for the time being. Further complicating matters, military deference standards are flexible and prone to manipulation in the national security context: “federal courts manipulate flexible legal standards to accord heightened deference to federal agencies during national crises, transforming standards such as ‘reasonableness’ and ‘good cause,’ ”\textsuperscript{226}

3. Secrecy as Administrative Self-Regulation\textsuperscript{227}

Finally, a significant number of military actions occur without the knowledge of the American public and are afforded what amounts to blanket military deference. This further shields the operational military from civilian and administrative law oversight. Compounding matters, while much of the administrative military’s actions and regulations are open, easily accessible, and unclassified, much of the operational militaries’ internal regulations and decision-making are outside the public domain and hidden.\textsuperscript{228}

\textsuperscript{223} Gilligan v. Morgan, 413 U.S. 1, 4 (1973). See also Goldman v. Weinberger, 475 U.S. 508, 509 (1986). The judiciary “must give great deference to the professional judgment of military authorities concerning the relative importance of a particular military interest.” Id.
\textsuperscript{224} Id.
\textsuperscript{225} Justice John Paul Stevens served as a naval officer during combat operations in World War II. He left the Court in 2010. Justice Alito served as an officer in the Army Reserves, seeing sporadic service in the 1970. Such instances are rare. There was a brief time between 1932 and 1936 when Justice Holmes (a combat veteran wounded at the Battle of Antietam left the Court) and Justice Hugo Black (an Army captain) was appointed and to the Court.
\textsuperscript{227} This term is borrowed from the writing of Daniel Patrick Moynihan, discussed \textit{supra} note 197.
\textsuperscript{228} For example, the Department of Defense and all the Secretaries of the Military Departments have open websites that organize all the applicable internal regulations to that
And within the DoD, over-classification of non-classified documents remains a continual problem. Indeed, citizen suits and judicial review is predicated on actual knowledge of the underlying regulation and some degree in familiarity to understand the regulation and its practical impact. This is particularly difficult for operational military matters that occur outside the United States. After all, how can the public make a determination whether an agency properly interpreted its internal guidance if it is classified or otherwise not easily accessible to the public?

Finally, in the national security context, courts will often ascertain whether there is an affirmative legal obligation when determining if an agency action is even reviewable. The operational military has considerably more discretion in its actions as compared to the administrative military. This adds final level of deference in determining whether their action was reviewable. A federal court recently considered the National Security Agency’s program for warrantless electronic surveillance of suspected terrorists stated (in dicta) that the terrorist surveillance program was not an “agency action” covered by the APA as there was no legal obligation to conduct the surveillance.

IV. THREE KEY FACTORS ACCELERATING AND EXACERBATING THE TWO-MILITARY DIVIDE

In this Part, I identify and analyze the three additional factors that are exacerbating and accelerating the two-military divide. They include:

(1) Congressional focus on the administrative military and the rise of the military-industrial-congressional complex;
(2) The decline in veterans serving in Congress influencing operational military oversight; and
(3) The awesome tools of modern warfare that empower the operational military.

agency. Contrast this to the operational combatant commands whose regulations and policies are not easily accessible to the public and are oftentimes classified.

230 See also Pozen, supra note 196.

231 ACLU v. NSA, 493 F.3d 644 (6th Cir. 2007). Since this ruling, Cyber-Command has been split off from the NSA and is now a full-fledged combatant command.
A. The Two Military Divide’s First Accelerant: The Rise of the Military-Industrial-Congressional Complex

In the 1961 Farewell Address, President Dwight Eisenhower famously warned of a “military-industrial complex.” Eisenhower, the Allied Commander in World War II, warned of the rise of a vast military organization and a persistent and powerful defense establishment whose interests were increasingly and inextricably linked with congressional interests. Noting that “our military organization today bears little relation to that known by any of my predecessors in peacetime,” President Eisenhower continued,

we have been compelled to create a permanent armaments industry of vast proportions. Added to this, three and a half million men and women are directly engaged in the defense establishment. We annually spend on military security more than the net income of all United States corporations . . . [i]n the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex.233

Eisenhower lamented that he was unable to tame the military-industrial complex during his tenure, “lay[ing] down [his] official responsibilities in this field with a definite sense of disappointment.” Today, the “military establishment [is] large enough to shape our dealings in the world and seriously influence our economy.”235

Following World War II, the U.S. military did not shrink to a small peacetime size with the Soviet threat and dawn of the nuclear age.236 Despite Eisenhower’s warnings, the military-industrial complex endures and evolves. Today, Congress is intimately involved with the defense acquisition process, a core administrative military function. Eisenhower’s warnings about the military-industrial complex can be more accurately described today as the military-industrial-congressional complex, as military expenditures are even

234 Id.
235 James Fallows, The Tragedy of the American Military, THE ATLANTIC, Jan./Feb. 2015, at 72. “Many on Capitol Hill see the Pentagon with admirable simplicity . . . [i]t is a way of directing tax money to selected districts. It’s a part of what they were elected to do.” Id.
236 President Eisenhower once famously quipped, “God help this country when someone sits in this chair who doesn’t know the military as well as I do.” MELVIN A. GOODMAN, NATIONAL INSECURITY: THE COST OF AMERICAN MILITARIZATION 193 (2013).
more closely linked to jobs in congressional districts. Following World War II, the defense industry became a major part of the U.S. economy. As former Secretary of Defense Robert Gates has noted, “Congress [makes] defense decisions based on parochial, constituent interests rather than national concerns.”

As whole communities and congressional districts became dependent on military bases and local jobs that flow from the military-industrial-congressional complex, congressional interests and incentives became increasingly aligned with the administrative military’s authorities. Indeed, the actions of the civilian Service Secretaries and civilian Defense acquisitions professionals are increasingly aligned; after all, the administrative military can win and lose jobs in congressional districts.

Despite the constitutional provision limiting Army appropriations to two years, it is now politically impossible for Congress to cut funding to currently serving standing military members (and their families). Cuts do occur during the periodic Base Realignment and Closure (BRAC) process, but often only after bitter fights in the halls of Congress. And what is good for the DoD may not be good for members of Congress and their constituents. For example, former Secretary of Defense Robert Gates sought to save DoD funds by closing Joint Forces Command in Norfolk, VA, an obsolete and duplicative military command. Gates’s goal of shuttering the command was fought by members of the Virginia congressional delegation at every turn, who saw jobs leaving and their influence waning.

When looking at Congressional interests vis-à-vis the two militaries, the Joint Strike Fighter (JSF) again provides an instructive example of how the two-military divide informs and shapes the modern acquisitions process. As discussed, the Goldwater-Nichols Act heavily emphasized joint warfare throughout its statutory scheme, leading to a revolution in joint warfare and an increasing focus on interoperability among the three services. It has not been lost on defense contractors that “jointness” is the defining feature of the Goldwater-Nichols military, and the JSF is being manufactured against this backdrop. It is the first aircraft in modern military history to be

produced across the three of the military branches that fly fixed-wing aircraft (Navy, Air Force, Marine Corps).

An enormously ambitious project, the total lifecycle cost for the purchase of the 2,000+ JSF planes to include purchase, operations and maintenance now exceeds $1.1 trillion.\textsuperscript{243} Cognizant that the manufacture of this massively expensive weapon would receive great scrutiny and interest from Congress, the manufacturer (Lockheed Martin) of the JSF purposely placed the location of its various parts throughout nearly all of the 50 states and as many congressional district as possible.

Shrewdly marketed and manufactured, the JSF is truly too big to fail. While the JSF has been the subject of numerous investigations, cost overruns, and criticisms concerning its safety and operational effectiveness, its manufacture continues apace. Members of Congress, in turn, can point to “victories” in their respective district – manufacturing jobs that bolster their individual standing and re-election bids. Members of Congress even established a bipartisan “Joint Strike Fighter Caucus” in an effort to protect the JSF from budget cuts.\textsuperscript{244}

The rise of the military-industrial-congressional complex and its corresponding incentive structure has led to strange military-congressional bedfellows. For example, Senator Bernie Sanders (I-VT) can fairly be described as skeptical of the operational military’s role in U.S. national security and defense spending more generally. But he has been a consistent and reliable booster of the JSF, irrespective of escalating costs. Indeed, his support was seen as critical to the overall success of the program. Vermont has benefitted from this military largesse: Lockheed-Martin established a manufacturing plant in Vermont outside Burlington, bringing thousands of jobs to Vermont. And the first state scheduled to receive the new JSFs? The Vermont Air National Guard.\textsuperscript{245} Senator Sanders took notice, and has consistently voted for Vermont jobs and jets.\textsuperscript{246}

\begin{flushright}
\textsuperscript{243} It is estimated the final cost of the total combined cost of the JSF will exceed $1 trillion dollars (this is not a typo). \end{flushright}
B. The Two-Military Divide’s Second Accelerant: The Decline in Firsthand Congressional Military Experience

Second, two recent trends demand a closer look and further accelerate the two-military divide’s effects. First, the military is increasingly an independent institution in both perception and practice that is further removed from civil society. The end of the draft in 1973 ended compulsory military service. Military service is no longer a shared societal experience in the age of an all-volunteer force. Second, congressional military experience and oversight of military matters has fallen to historic lows. Goldwater-Nichols was passed when military service in both congressional chambers was near 70%. Since that time, it has plummeted to 20% with oversight ramifications, discussed below.

The rise of the operational military has coincided with two trends: a dramatic decrease in the number of veterans serving in Congress and a decrease in congressional standing and trust as a public institution. In contrast, the military remains one of the few public institutions that enjoy a favorable standing in the eyes of the American public. Its standing is in sharp contrast to Congress’s: a recent Gallup poll showed that 72 percent of people had “a great deal” or “quite a lot” of confidence in the military but only 12 percent of the population felt the same for Congress. With that decrease has come a significant decline in firsthand knowledge and relevant expertise over DoD matters. Congress, in turn, has been overly deferential in operational military matters.

Recent political science research has begun to shine light on the consequences of this decrease in the number of veterans in Congress for voting patterns and oversight over operational military matters. Two statistically significant voting trends are emerging. First, members of Congress with military experience were more likely to vote to increase congressional access to information during the wars in Iraq and Afghanistan. This makes intuitive sense. Veteran members of Congress – male or female, regardless of political party – will better understand the type of information necessary to wage war, contextualize it accordingly, and not

251 Id.
252 Id. at 336-338 (“stating that military service is an incredibly unique experience that instills a distinct set of values within its members”).
excessively defer to the military. They are more likely to ask the right questions and not give military leadership a pass. Second, members of Congress with military experience are more likely to limit the use of troops in Iraq and Afghanistan, limit their redeployment to an operational theater, and exercise control over American military personnel in a combat theater.

Goldwater-Nichols was passed during a time of relative high levels of firsthand military experience in Congress. Those days are long gone and, absent a draft, these numbers are not returning. These early political science findings have implications for war termination, further accelerating the decline in civilian control of the operational military.

Congressmembers’ lack of familiarity with operational military matters should not be confused with a lack of interest. Consider the recent operational military tragedy in Niger, where four special operations forces were tragically killed in an operation largely out of sight of the American people. The existence of troops in Africa caught many Americans – and foreign policy experts in Congress – off-guard. Many senior members of Congress with military oversight responsibilities professed ignorance of the very existence of military troops in Niger and neighboring African countries. But the existence of these troops should have come as no surprise. After all, Africa Command is the newest geographic combatant command and has been fully operational since 2007. Military operations in Africa have steadily increased since that time. The Pentagon, too, has consistently maintained that Congress was appropriately informed in accordance with the War Powers Resolution.

C. The Tools of Modern Warfare Further Empower the Operational Military

Finally, the awesome tools of modern warfare further empower the operational military at the expense of civilian oversight. Today, these

---

253 Id. at 330. DAVID AUERSWALD & COLTON CAMPBELL, CONGRESS IN CIVIL-MILITARY RELATIONS (2015).
255 Lupton, supra note 254.
operational military commanders – often out of sight and far removed from the American public – increasingly possess the awesome legal authority to utilize all the tools of modern warfare. Military and executive branch officials increasingly favor utilizing all the tools of modern warfare including cyber warfare, special operations forces, and drones.

The rise of special operations forces illustrates this trend. Special Operations Command (SOCOM) is the very personification of the operational military, with special training and amplified operational legal authorities. Increasingly SOF operates pursuant to covert action authorities, secret operations where Congress and the American people may never be notified of their occurrence.\textsuperscript{257} Elite, well-trained, possessing a “light footprint,” and incredibly effective, special operators have become the darling of Congress and the executive branch with a corresponding massive increase in budget in recent years. The public, too, has become enamored with their exploits, fueled by Hollywood films and media stories about their heroism.\textsuperscript{258} Clearly, special forces are a brilliant tactical tool. But their widespread (excessive?) use as the military tool of choice raises fundamental concerns about how the U.S. goes to war and conducts operations. The widespread employment of special operations forces since 9/11 (often unknown to the American people) helps avoid broader discussions of the number of “boots on the ground” in a particular conflict that could raise questions about how the U.S. military is employing its forces overseas.

The Nunn-Cohen Amendment to the Goldwater-Nichols Act established Special Operations Command (SOCOM).\textsuperscript{259} It is a unique functional combatant command in that it also possesses awesome operational military authorizes and additional administrative military authorities. It is not limited by geographic boundaries.\textsuperscript{260} And it is no exaggeration to state that special operations forces operate nearly everywhere – at last count they were in 137 nations. Despite being a small fraction of the military (just five percent), they now account for the majority of casualties.\textsuperscript{261} Because of their stealth, lethality, and expertise, special operations forces are increasingly the tools of choice for executive branch officials. SOCOM’s activities are often cloaked in secrecy and occur outside the United States. Special operations often operate in so called “gray zone” conflicts pursuant to covert action

\textsuperscript{258} See, e.g., ZERO DARK THIRTY (Columbia 2012).

\textsuperscript{259} 10 U.S.C. § 167 (2012).

authorities that are often out of sight of the American public.\textsuperscript{262} But is Congress attempting to reign in or otherwise examine the widespread use of special operations in light of this dramatic shift in the nature of warfare? No.\textsuperscript{263}

Congress has facilitated the rise of SOCOM by routinely increasing its role and expanding its budget.\textsuperscript{264} It has also seen an expansion of legal authorities where all active and reserve special operations forces stationed in the United States are assigned to special operations command, creating what has been described as a “fifth branch of the military” to complement the Army, Navy, Air Force, and Coast Guard.\textsuperscript{265} Not only do special operations forces enjoy dual operational and administrative authorities, they increasingly operate pursuant to both title 10 and title 50 (covert action) authorities, providing the President with remarkable lethality, flexibility, and a truncated decision-making process.\textsuperscript{266} Because of these dual command authorities, SOCOM may be fairly described as a “super combatant-command.”\textsuperscript{267} Within SOCOM, the executive branch increasingly uses Joint Special Operations Command (JSOC) for the most dangerous missions: its truncated chain of command, expertise, lethality, and overall effectiveness is legendary.\textsuperscript{268}

In addition, while all agencies are delegated authority from Congress, the DoD delegates internally from the President as Commander in Chief to lower tactical commanders. These delegations have been primarily focused on providing increasing authority to the operational military commanders and often involve the loosening of the rules of engagement.

\textsuperscript{262} 50 U.S.C. § 3093 (e) (2012). “Covert action” means an activity or activities of the United States Government to influence political, economic, or military conditions abroad, where it is intended that the role of the United States Government will not be apparent or acknowledged publicly. (emphasis added). Robert Chesney, \textit{Military-Intelligence Convergence and the Law of the Title 10/Title 50 Debate}, 5 J. NAT’L SEC. L. & POL’Y 539 (2012).

\textsuperscript{263} But see 10 U.S.C. § 130 (f) (2012); Rudesill, \textit{supra} note 56, at 64 (asserting that the DOD “increasingly reports to Congress about such operations in a manner that begins to approach the covert action process”).

\textsuperscript{264} ANDREW FEICKERT, U.S. SPECIAL OPERATIONS FORCES (SOF): BACKGROUND AND ISSUES FOR CONGRESS, CONG. RESEARCH. SERV. (Jan 6, 2017).

\textsuperscript{266} See Chesney, \textit{supra} note 259.

\textsuperscript{267} See generally \textit{Joint Publication 1}, \textit{supra} note 37, at III-6, III-7 (“SOCOM is unique among the combatant commands in that it performs service-like functions [to include] organize, train, equip, and provide combat-ready SOF to the other combatant commands . . .”.) \textit{Id}.

\textsuperscript{268} Consider the military mission leading to the killing of Osama bin Laden in Pakistan, a raid that was conducted pursuant to operational military authorities.
In sum, if civilian control of the military is better understood as a process and not a factual matter, Congress should continue to play a more meaningful role in this process. The legislative branch serves as the connective tissue between the military and citizenry. But Congress is largely absent from existing core processes to include the operational military’s creation and design as set forth by the UCP plan and the yearly NDAA budget process where Congress focuses disproportionately on administrative military matters. This absence is further exacerbated by lower firsthand congressional military experience that influences voting in operational military matters. Meanwhile, the operational military’s power and influence continues to grow without comparable oversight.

V. Recommendations to Remedy the Two Military Divide’s Effects

A. Improving Civilian Control of the Military and Congressional Oversight With a New Model for National Security Governance

Goldwater-Nichols, passed in the aftermath of military tragedy, was in many ways a stunning success. It improved war-fighting, empowered operational military commanders, diminished inter-service rivalry, and centralized the way that military advice was provided to the President and civilian military leadership.

But its legacy is mixed and it “overshot” in many important respects. At its core, Goldwater-Nichols is a Cold War statute designed for a far different time. The world has changed dramatically since the law’s passage in 1986, and the military is becoming an increasingly independent institution further removed from the American citizenry that it is sworn to protect. Goldwater-Nichols empowered the operational combatant commanders in invisible or unintended ways; the result is to weaken civilian control of the operational military and create an enduring two-military bureaucracy. The law incentivized congressional focus on administrative matters at the expense of operational ones, accelerating the two-military divide. And

---
269 Yoo, supra note 185, at 2283-2292. It is also becoming increasingly outdated (“The typical 20th century organization has not operated well in a rapidly changing environment. Structure, systems, practices, and culture have often been more of a drag on change than a facilitator. If environmental volatility continues to increase, as most people now predict, the standard organization of the 20th century will likely become a dinosaur.”) Goldwater-Nichols Hearings, supra note 33 at 2 (statement of Mr. James Locher).
270 See supra Part III.
despite its stated objective, it failed to rein in the massively inefficient administrative bureaucracy and expensive acquisitions process.\textsuperscript{271}

It remains unclear whether members of Congress understand the scope and scale of institutional executive drift, despite some hopeful, initial steps by ranking members of the Senate Armed Services Committee (SASC) to revise Goldwater-Nichols 30 years after its passage. Indeed, the time is right for a \textit{third} major national security act to complement and partially replace the National Security Act and Goldwater-Nichols. This new act should first take an honest assessment of how the military functions across the world and address the operational military’s ever-expanding foreign relations and non-military functions. Lawmakers should acknowledge that the expanding definition of “national security” should not default to military solutions.\textsuperscript{272} Today, other agencies (USAID, State) play an increasingly important role in national security governance and decision-making but their budgets (and influence) is waning. While each agency now competes with one another for personnel and funding, the DoD is by far the largest agency at 3.1 million people and a budget in excess of $700 billion a year.\textsuperscript{273}

The Part presents recommendations to increase congressional oversight and updating the Goldwater-Nichols Act for the twenty-first century. After 9/11, Congress passed the comprehensive Intelligence Reform and Terrorism Prevention Act that reformed the intelligence community and established the Secretary of Homeland Security as a Cabinet-level official. Yet no such act emerged to address DoD’s governing legal architecture. The Goldwater-Nichols Act remains largely unchanged from its Cold War origins. And despite calls for defense reform, it remains intact.

Concerns about the derogation of civilian control of the military are more important and timelier than ever. At the time of this writing, there are just two civilians providing executive branch oversight over the operational military: President Trump and Secretary Mattis (himself a former combatant commander, requiring a congressional waiver as part of the confirmation process \textsuperscript{274}). And the President has shown an increased

\begin{footnotesize}
\begin{enumerate}
\item National security is not defined in law, but is defined by DoD in joint doctrine. It has a capacious definition to include “A collective term encompassing both national defense and foreign relations of the United States with the purpose of gaining . . . [a] military or defense advantage over any foreign nation . . . [a] favorable foreign relations position . . . [a] defense posture capable of successfully resisting hostile or destructive action from within or without, overt or covert.” \textit{DoD DICTIONARY}, supra note 8, at 162.
\item The Department of Homeland Security is also taking on an increased operational role overseas.
\item 10 U.S.C. § 113 (2012).
\end{enumerate}
\end{footnotesize}
willingness to delegate greater and greater authorities to the operational military commanders in the field, at times loosening rules of engagement while delegating responsibilities to his military operational commanders. Money continues to flow to DoD as one of the few federal agencies witnessing funding increases.

A new national security law should address the complex international security environment through the establishment of a more whole of government approach to complex international security issues. A more balanced and interagency-focused Goldwater-Nichols would better integrate other agencies into the national security apparatus. What Goldwater-Nichols did for “jointness” in bringing the different services together, it can do for an interagency national security apparatus. Consider the following five ideas.

First, we are simply asking too much from one person, the Secretary of Defense, to referee disputes between the administrative and operational militaries as well as civilian and military leadership. Within the operational military’s chain of command there is just one level of civilian oversight (the Secretary of Defense) before reaching the Commander in Chief. In contrast, the administrative military has two levels of oversight, ensuring an additional “civilian buffer.” One immediate, logical step is to simply require a commensurate amount of civilian control across both militaries. If three civilians oversee the administrative military, why should two civilians be responsible for operational military oversight? To remedy this, a new law should create a civilian “combatant commander secretary” to help oversee the military combatant commands and operational military. This would provide equal level of civilian oversight of both militaries, freeing up the Secretary of Defense to delegate certain oversight authorities to these combatant command officials.

This would provide several advantages and would obviate any perception that the Secretaries of the military departments provide some modicum of control over operational military matters. Ideally, the civilian combatant command secretary would be a senior official with deep foreign policy experience and relationships within a particular geographic area. He or she could guide the military combatant commander as he or she learns the Area of Responsibility (AOR). Oftentimes, the military combatant commander was never stationed in that particular part of the world and faces a steep curve in learning the language, culture, and regional dynamics. And there is precedent for such a move: we recognized the importance of having senior diplomats in both Iraq and Afghanistan during major combat

---

operations with the appointment of Ambassadors Ryan Crocker and Richard Holbrooke to Iraq and Afghanistan, respectively.

Alternatively, co-equal ambassadors or foreign policy experts could be incorporated into the operational military’s command to guide and assist the geographic combatant commanders. This is an intermediate step to help ensure a more holistic, integrated government approach to foreign policy. These co-equal ambassadors should be placed directly in the chain of command and staffed accordingly. This would help ensure continuity and a cohesive diplomatic/military voice in international relations.

Taking this first step adds an additional layer of civilian control of the military, mirroring the administrative military. It also ensures foreign policy expertise and a non-military voice on complex international relations and foreign policy matters.

It is also a frank acknowledgment that the military is called upon to do numerous missions not because they have the expertise but because they are there. Too often this leads to military solutions for non-military problems – if you are a hammer, complex national security problems too often appear as nails. And that hammer is only getting bigger. This is also a realistic, rational step to help counteract the massive budgetary discrepancy between the DoD and other national security-related agencies.

Second, the combatant commands, Office of the Secretary of Defense, State Department, and Intelligence community all lack an aligned geographic framework for defining the regions of the world. Why? Too often, they are literally not on the same page or on a completely different map. Even the Office of the Secretary of Defense is organized differently than the Unified Command Plan. This unnecessarily handicaps policy development and integration across the government. One agency zigs while the other zags. As national security governance requires tools of diplomacy, intelligence, military, and economics, there should be one, single aligned national security and foreign policy “map” that integrates all critical actors and takes advantage of the power of alignment.

Third, we should strongly consider providing a more formalized mechanism for dissent and take steps to de-centralize the military advice

276 For example, the combatant commands have six geographic combatant commands (Northern, Southern, Africa, Europe, Pacific, and Central) while the State Department has six different regions (Africa, Europe and Eurasia, Near East, Western Hemisphere, East Asia and Pacific, and South Asia), and the CIA Intelligence directorate has five (Asia Pacific, Latin America, Africa, Near East and South Asia, and Russia and Europe). See CENTER FOR STRATEGIC AND INTERNATIONAL STUDIES, BEYOND GOLDWATER-NICHOLS: U.S. GOVERNMENT AND DEFENSE REFORM FOR A NEW STRATEGIC ERA 38 (2006).
that is given to the President, Security of Defense, and National Security Council. Centralization and unification has advantages, but it also comes with costs.\textsuperscript{277} Under Goldwater-Nichols, military advice is now transmitted via one person, the Chairman of the Joint Staff.\textsuperscript{278} While each member of the Joint Chief of Staff (Army, Navy, Air Force, Marines) may submit a matter in dissent, that opinion is transmitted via the Chairman, who submits his own advice.\textsuperscript{279}

Unlike the other members of the Joint Staff, the Chairman has several advantages. First, he is widely recognized as the senior military officer in the DoD, affording him a special status as “first among equals” as the face of the military to the media and American public. Second, the Chairman is focused on operational military matters and lacks the “staffing, training, and equipping” administrative responsibilities that are the outsized focus of the administrative military leadership. Finally, the Chairman’s Joint Staff may be the most effective staff in government, and the staff is predominantly composed of active-duty military forces. Day to day, the Chairman and his staff only serve the operational military and the operational chain of command, potentially undermining the important role of the civilian Office of the Secretary of Defense.

A revised Goldwater-Nichols should authorize a legal mechanism for the top civilian leaders to hear a wide variety of voices across the services and provide mechanisms for dissent. This would have the additional benefit of providing a more direct linkage between the operational military and administrative military.

Fourth, we should review and overhaul the national security budgetary process. The National Defense Authorization Act (NDAA) funds the DoD while a separate funding process exists for the other national security agencies (e.g. State, USAID, Homeland Security). While Congress often focuses on administrative matters within the NDAA, it does receive a baseline of congressional attention every year. A massive monetary infusion in USAID and State is unlikely anytime soon, but they clearly play a critical (albeit diminished role) in responding to national security crisis. Why not integrate State and USAID funding into the existing NDAA process? Alternatively, the NDAA could include an operational/foreign policy section that integrates the budgets for the core national security agencies or reinvigorate the Office of Management and Budget’s role in refereeing national security priorities.

\textsuperscript{279} Id.
Fifth, the administrative military should be accountable to the operational military for the equipment, weapons, and personnel that it provides to the commanders in the field. Put simply, the DoD and administrative military “is structured to plan and prepare for war, but not to fight one.”280 A revised Goldwater-Nichols should mandate a synchronization cell with command and control authority to ensure that the administrative military is responsive in real time to the requirements of the operational military. At this time, this is done via the Joint Requirements Oversight Council (JROC), but this entity lacks full legal authority to ensure oversight.

Finally, while there are signs that Congress might take a fresh look at Goldwater-Nichols with the potential of breathing new life into legislative oversight, more must be done. Senators McCain (R-AZ) and Reed (D-RI) have held bi-partisan hearings on the need for a new Goldwater-Nichols Act, but future legislation remains uncertain.281 Any legislative change should focus on breathing life into legislative oversight of the operational military, addressing the core unintended consequence of the Goldwater-Nichols Act. This includes Congress taking a greater role in the combatant commanders’ budget process and developing a better understanding of their roles in foreign policy. Right now, the geographic combatant commanders are required to brief Congress once a year. In light of their already robust role in foreign policy and statecraft, they should be required to brief congressional leaders semi-annually.

And Congress should be actively engaged in exercising its investigatory power to better understand where combatant commanders are requesting forces to be deployed throughout the world – particularly special operations forces. This is particularly important for areas that are seeing an increased American force presence (Philippines, Africa, Southeast Asia). Too often, Congress appears to be caught off-guard about these operations. With a continual Authorization for Use of Military Force (AUMF) in place and a NDAA passed every year, combatant commanders possess the legal and fiscal authority to conduct a wide-range of missions outside the public eye. Congress should be better informed and engaged on these missions.

### B. Reforming the Administrative Procedure Act to Better Reflect Organizational Realities

As discussed in Part III, the APA is no longer aligned with the organizational realities of the two-military state. The APA was passed just one year before the National Security Act and forty years prior to Goldwater-

Nichols and remains antiquated as applied to the modern military. As a general matter, most administrative military actions that occur within the United States remain subject to the APA, while most operational military actions taken by combatant commands are not subject to the APA.282

First, the definition of “agency” should be updated. Specifically, the APA is silent on how administrative law should address actions taken by combatant commanders. Both the Secretaries of the Military Departments and combatant commands are one step below the Secretary of Defense in the DoD hierarchy, but only the Secretaries of the Military Departments are “agencies” within the plain meaning of the APA.

Second, the APA exemptions should be reformed to eliminate “the time of war” exemption to more precisely address the military activities that take place in peace and the expanding menu of actions short of war. For example, the operational military does conduct certain “gray area” activities that are neither purely administrative or operations. Both the United States Navy and Coast Guard conduct a wide range of activities on the high seas and outside the United States that may be fairly described as “readiness” activities that are hard to clearly define and are not purely wartime activities.283 As operational activities, however, they currently fall outside the APA’s jurisdiction.

The military function exception should be updated and defined more precisely. Rulemaking and adjudications that involve “the conduct of military or foreign affairs functions” are exempt.284 Notice of a proposed rule, opportunity for public comment, and publication of the final rule are central to administrative law. Courts have struggled to determine what, exactly, is a military function, applying the military function exemption to the creation of temporary security zones,285 and to the determination of death of a serviceman because it “involved military affairs and public benefits.”286

Of course, any attempt to reconcile the APA with the modern military organization may run against significant headwinds within the DoD. And they will likely assert that this will only harm military readiness by exposing an increased number of activities to judicial review. But the APA has had an

282 See, e.g., Story v Marsh, 574 F. Supp. 505 (1983), revd. on other grounds, 732 F2d 1375 (CA8 Mo. 1984). Masur, A Hard Look or a Blind Eye: Administrative Law and Military Deference, 56 HASTINGS L.J. 441, 512-513 (2004) (stating that “the only cognizable exceptions that might exempt a military organization... from APA strictures are the narrow ones written into the statute itself.”)
283 Breyer Oral Argument, supra note 215.
enormous impact in making governmental activity “more open, accountable, and responsive to the public than in any other country”\textsuperscript{287} and can play a powerful role in ensuring civilian control of the military.\textsuperscript{288}

CONCLUSION

The Goldwater-Nichols Act, passed in 1986 in the aftermath of several military misadventures, managed to reduce inter-service rivalry through emphasis on joint warfare, but failed to reinforce civilian control over the military. Instead, it discouraged congressional involvement in the hard questions faced by increasing the authority and autonomy of geographic combatant commanders at the heart of the operational military. Today, Congress remains focused on the administrative military. We are witnessing increased executive drift facilitated by this Act and the two-military divide.

This trend comes into sharper relief as the military looks to future conflicts and takes on new missions. The administrative military is legally and doctrinally at the operational military’s service, and its leadership is accountable when forces are not combat-ready. But it is strange indeed to assign accountability when the administrative military lacks control over its own priorities, which are shaped by congressional preferences.

When the Congress focuses solely on the administrative military, it abrogates its constitutional responsibility to be a co-equal partner in answering the following questions: Should we be operating in hundreds of nations in such a manner? What is the precise scope of the AUMF? What is the end state? At the time of this writing, we are still in the longest period of armed conflict in American history – when will this end?

The answers to these questions will remain unsatisfactory absent a congressional awakening or renewed interest by the American public. Our nation’s strong tradition of civilian control of the military is shaped more by tradition and constitutional norms and should not be taken for granted. As we look to the military’s future in increasingly dangerous times with growing pressures on civil-military relations, we must understand the military’s modern agency design and its corresponding consequences. It is only then that we can act to shape the future of civil-military relations and ensure a military that safeguards our national security while remaining subordinate to civilian leadership.
