reader, since they deal with phases of the law of master and servant which are as yet uncommon in this country, only a few of our states having enacted similar legislation. The author dwells at length on the English procedure under this act, and has doubtless furnished to the English practitioner much information of value and easy of access. The parts with reference to these two acts are, of course, additions by the editor. He shows how the doctrine of common employment has been cut down by the Act of 1880, and what a great enlargement of liability of the employer along different lines was made in the passage of the Compensation Act of 1897.

While the ground covered is, in the main, adequately treated in view of the limited space at the author's command, nevertheless the work has not the symmetry of arrangement one would expect. Undue prominence is, in several instances, given to topics which might with advantage be replaced by others. The important questions arising under proximate and remote causes and the effect of intervening causes are passed over with very slight attention. One thing, however, which must be commended highly, is the very copious citation of cases, every proposition being well sustained by the authorities. A carefully arranged table of cases, and accurate index complete what will, no doubt, prove a very acceptable contribution to the literature of the profession.

J. A. McK.
